

COURSE CURRICULUM

B.Sc. Microbiology

Batch:2022-2023

Academic Year: 2023-24 Updated on: July, 2023

VISION

• GSFCU strives to be the best compact boutique institution with a futuristic approach, encouraging student centric culture and sharpened focus on developing industry ready & employable students with all-round development.

MISSION

- Establish an institution, which promotes creativity and innovation.
- Develop unique quality standards for academic excellence and pedagogical innovations.
- Remain agile through learning ecosystem with flexible processes & systems.
- Holistic growth for industry readiness.

No.	Programme Outcomes (POs)	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
PO1	Basic Knowledge: To impart knowledge regarding basic concepts of applied chemical sciences.	Remembering and Understanding	Explain, Describe, Discuss, Recall, Locate
PO2	Interdisciplinary approach: To explain the relationships between chemical sciences, biological sciences, physical sciences and mathematical sciences.	Application and Analysing	Apply, Practice, Interpret, Select, Correlate
PO3	Practical learning: To perform procedures as per laboratory standards in the areas of Chemical Sciences and to think analytically.	Analysing	Compare, Classify, Select, Investigate
PO4	Effective Communication and social Interaction: To communicate effectively in terms of reading, writing, speaking and delivering the view to others.	Understanding	Explain, Describe, outline, Predict, Summarize
PO5	Ethics: To culminate and understand the moral values for any of the subjects with respect to good practices and humanity.	Evaluating	Judge, Assess, Estimate, Predict, Argue
PO6	Environment and Sustainability: To explain the importance of ecological balance along with conservation of natural resources for human wellbeing.	Creating	Construct, Develop, Produce

No.	Programme Specific Outcomes (PSOs)	Blooms' Taxonomy Domain	Blooms' Taxonomy SubDomain
PSO1	Students will gain and apply knowledge of scientific concepts such as chemistry, physics, mathematics, organic chemistry, inorganic chemistry, physical chemistry, analytical chemistry and computer applications in chemistry to solve problems related to the field of Chemistry.	Remembering and Understanding	Explain, Describe, Discuss, Recall, Locate
PSO2	Students will be able to demonstrate learning skills to work as a team in a multidisciplinary environment.	Application and Analysing	Apply, Practice, Interpret, Select, Correlate
PSO3	Students will be able to design and develop sustainable solutions to major environmental/biological problems by applying appropriate chemistry tools.	Analysing	Compare,Classify, Select, nvestigate
PSO4	Students will be able to demonstrate effective writing and oral communication skills.	Understanding	Explain, Describe, outline, Predict, Summarize
PSO5	Students will have knowledge and understanding of norms and ethics in the field of chemistry.	Evaluating	Judge, Assess, Estimate, Predict, Argue
PSO6	Students will be able to design, perform experiments, analyze and interpret data for investigating complex problems in chemistry and related fields.	Creating	Construct, Develop, Produce

School of Science B.Sc. Microbiology, Course Curriculum Academic Year, 2023-24

About the Program:

Science is the basic foundation of any technological and engineering creation. In view of the changing scenario at the national and international level in the field of Science and Technology, there is a great demand for basic sciences with considerable knowledge of its applications. GSFC University is committed to high academic standards.

The B.Sc.(Hons.) Microbiology Program is an Honours Degree which is designed for Six Semesters (Three Years) in such a way that a good basic foundation of subjects is laid and applications along with recent developments are covered. Students will also get theoretical and practical knowledge by undergoing industrial internship after every semester.

The more focused specialization course of Microbiology is designed to full fill recent demands of industrial career. The B.Sc.(Hons.) Microbiology Program provides an opportunity to make a career in R&D, Industries and Academic Institutions. Opportunity for the placement may be provided by the Institute

COURSE CODE BSMO111

COURSE NAME Cell Biology

SEMESTER I

	Teaching S	Scheme (Hou	rs)	Teaching Credit							
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit				
45	30	00	75	3	1	0	4				

Course Pre-requisites	School Level Understanding of Biology and a keen interest in learning.
Course Category	Professional Core Courses
Course focus	Employability
Rationale	The subject "Cell Biology" provides a comprehensive understanding of life's
	foundation through units on cell structure, organelles, and functions. It covers
	molecular aspects, the endomembrane system, cell division, and essential research
	tools, fostering insights into biology's intricate workings.
Course Revision/	07/11/2023
Approval Date:	
Course Objectives	To enable the student to:
(As per Blooms'	1. Gain the basic knowledge and understanding of basic concept and
Taxonomy)	structure of cells and cell organelles.
	2. Understand the molecular structure and function of major organelles.
	3. Understand and analyze the role of endomemranous cell organelles
	4. Learn and understand cell division and cell cycle.
	Understand and apply the basic tools in cell biology.

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Basic concept of cell and structure of organelles Introduction to	20%	9
the concept of cell and evolution of eukaryotic cells. General structure		
and constituents of cell. Similarities and distinction between plant and		
animal cells. Structure, composition and function of cell wall and the cell		
membrane. Membrane transport.		
Unit 2: Molecular structure and function of major organelles Nucleus	20%	9
- Nuclear envelope, nuclear pore complex and nuclear lamina.		
Chromatin – Molecular organization. Chloroplast, Mitochondria,		
Lysosomes, Peroxisomes, Vacuoles.		
Unit 3: The Endomembrane system	20%	9
Endoplasmic reticulum, Golgi Apparatus, Ribosomes, Ribosomes in		
relation to cell growth and division. Cytoskeleton: structure, composition		
and function. Cilia and flagella, Centrioles, Extracellular matrix and Cell		

adhesion in cell cycle regulation		
Unit 4: Cell division and cell cycle	20%	9
Mitosis and Meiosis. Eukaryotic cell cycle. Cell cycle control in		
prokaryotes and eukaryotes.		
Unit 5: Basic tools in cell biology	20%	9
Basics of Microscopy, Microtomy, Density gradient centrifugation.		
Staining techniques.		

List Of Practical	Weightage	Contact hours
1. Good Laboratory Practice and Safety in Microbiology & Biotechnology Lab.	2%	2
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, light microscope) used in the microbiology laboratory.	2%	2
3. Preparation of various stains	2%	2
4. Simple staining of plant sections	2%	2
5. Simple staining of bacterial culture and wet mount of Hay infusion	2%	2
6. Separation of Cell organelles by Sucrose Gradient (Virtual Demo).	2%	2
7. Negative staining	2%	2
8. Observation of various stages of mitosis by permanent slides	2%	2
9. Observation of various stages of meiosis by permanent slides	2%	2
10. Sterility practices in cell and tissue culture	2%	2
11. Cell culture, preservation and revival of Animal Cell Culture (Demo) & Preservation of Bacterial culture by Glycerol stock method	2%	2
12. Measurement of cell viability of yeast cell by MTT or (Methylene blue) Trypan blue assays.	2%	2
13. Revision	2%	2
14. Revision	2%	2
15. Revision	2%	2

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy	Blooms' Taxonomy Sub
	Domain	Domain
After successful completion of the above course,	Remember,	Describe
students will be able to:	Understanding	
CO1: Understand the structure, composition and function		
ofcell organelles.		
CO2: To describe physiological processes and molecular	Remember,	Explain
mechanisms regulated by cell organelles.	Understanding,	
	apply	
CO3: Understand and analyze the role of	Understanding,	Explain
endomembranous system.	Analyze	
CO4: Understand the principal and types of cell signaling.	Understanding	Describe
CO5: Remember, understand and apply the basic tools in	Remember,	Describe
cell biology.	Understanding

Course Pre	School Level Understanding of Biology and a keen interest in learning.
-re quisite	
Course Category	Core Professional
Course Focus	Employability
Rationale	The molecular biology course explores fundamental aspects of genetic
	material, replication, transcription, and translation. It delves into DNA's role
	as hereditary material, its structures in diverse organisms, replication
	mechanisms, transcription processes, and translation machinery, fostering a
	deep understanding of gene expression.
Course Revision/	07/11/2023
Approval date	
Course Objectives	To enable the student to:
	1. Understand the historic perspective, types and structure of genetic
Blooms'	material.
Taxonomy)	2. Gain knowledge about DNA replication mechanism in both
• /	prokaryotes andeukaryotes
	3. Comprehend the process of transcription in prokaryotes and eukaryotes
	4. Familiarize with post-transcriptional processing.
	5. Develop an understanding of translation in both prokaryotes and
	eukaryotes.

Course Content	Weightage	Contact hours
Unit 1: Structures and types of Genetic Material DNA as heritable material, Structure and types of DNA in prokaryotes	20%	9
		İ
and eukaryotes, Salient features of double helix, Genome organization		İ
in Prokaryotes and Eukaryotes.		İ
Unit 2: Replication of DNA	20%	9
Types of replication in Prokaryotes and Eukaryotes, Enzymes and		l
proteins involved in DNA replication. Mechanism of DNA replication		1
in Prokaryotes and Eukaryotes, Telomere replication, Various		1
models of DNA replication.		l

Unit 3: Transcription in Prokaryotes and Eukaryotes	20%	9
Structure, Function and Biological Properties of RNA, The structure		
and function of gene, promoters and terminators. Transcription		
Initiation, elongation and Termination, RNA polymerases.		
Unit 4: Post-Transcriptional Processing	20%	9
Concept of introns and exons, RNA splicing, concept of alternative		
splicing, Polyadenylation and capping, Processing of rRNA.		
Unit 5: Translation (Prokaryotes and Eukaryotes)	20%	9
The Genetic Code, Codons and anti-codons, the ribosomes.		
Translation mechanism in prokaryotes and eukaryotes. Gene		
Expression in Prokaryotes: the LAC Operon. Gene expression in		
Eukaryotes.		

List Of Practical	Weightage	Contact hours
1: Good Laboratory Practice and Safety in Molecular Biology Lab.	2%	2
2: To study the principle and applications of important instruments (pH meter, Centrifuge, Spectrophotometer, Electrophoretic unit) used in the Molecular Biology laboratory.	2%	4
3: To study the principle and applications of important instruments (pH meter, Centrifuge, Spectrophotometer, Electrophoretic unit) used in the Molecular Biology laboratory.	2%	4
4: Pipetting skills	2%	2
5: Basic calculations (normality, molarity, weight conversion) used in molecular biology	2%	2
6: Preparation of solutions for Molecular Biology experiments	2%	2
7: Virtual Lab demonstrations: DNA Isolation, Purification and quantitation	2%	2
8: Virtual Lab demonstrations: RNA Isolation, Purification and quantitation	2%	2
9: Virtual Lab demonstrations: Protein Isolation, Purification and quantitation	2%	2
10: Model Building - DNA structure, replication	2%	2
11: Revision	2%	2
12: Revision	2%	2
13: Revision	2%	2

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1: Understand basic concepts of molecular biology including genome, DNA,RNA	Remember, Understanding	Describe
CO2: Understand and compare the mechanisms of DNA replication in both prokaryotes and eukaryotes and differentiate between them.	Remember, Understanding, Analyze	Explain, Compare
CO3: Understand and compare the mechanisms of DNA transcription in both prokaryotes and eukaryotes and differentiate between them.	Remember, Understanding, Analyze	Explain, Compare
CO4: Understand and compare the post transcriptional modifications of RNA and concepts of splicing and capping.	Remember, Understanding, Analyze	Explain, Describe, Compare
CO5: Understand and compare the mechanisms of translation in both prokaryotes and eukaryotes and differentiate between them	Remember, Understanding, Analyze	Describe, Compare

Course Pre-	Knowledge of basic precalculus concepts and skills
requisites	
Course Category	Generic Elective
Course Focus	Skill Development
Rationale	This course involves the basics of Trigonometry and inverse trigonometry.
	Also develop the concepts of Limit, continuity, differentiation and integration
	of functions of one variable and basic applications of it. students will also get
	to know about Matrices, determinants and their applications.
Course Revision/	14 th March 2020
Approval date	
Course Objectives	To enable the student to:
(As per Blooms'	1: Demonstrate knowledge of basic precalculus concepts and skills.
Taxonomy)	2: Evaluate limits, recognize continuity and use the properties of continuous
	functions.
	3: Find derivatives of algebraic and trigonometric functions using the
	definition orbasic rules of differentiation.
	4: Find rates of change, solve related rate problems, Find extreme values in
	optimization problems.
	5: Apply the concepts and methods described in the syllabus, solve
	problems using linear algebra and will know a number of applications of
	linear algebra

Course Content	Weightage	Contact
		hours
Unit 1: Trigonometry and its identities, inverse trigonometric	20%	12
functions, Concept of a limit and functions, Continuity and		
derivative of elementary functions, Rules of differentiation (without		
proof), Chain rule (without proof), differentiation of implicit		
functions.		
Unit 2: Indeterminate forms, L. Hospital's rules, Applications of	20%	12
Derivatives: maxima and minima of function. Standard		
integration formulae, Integration by the method of substitution		
Unit 3: Integration by parts, Integration by the method of partial	20%	12
fractions, definite integration, fundamental theorem of		

calculus Applications of Integrations: Area and volume	
Unit 4: Introduction to matrices, different types of matrices, Elementary operations on matrices and types of matrices, Symmetric and skew-symmetric matrices, Hermitian and skew-Hermitian matrices. Rank of a matrix. Row Reduced Echelon form of a matrix and matrix inversion using it. Determinant of 2×2 and 3×3 matrices. Inverse of a square matrix.	12
Unit 5: Homogeneous and Non-homogeneous linear equations. Application of matrices in solving a system of simultaneous linear equations. Eigen values, Eigen vectors and the characteristic equation of a matrix. Cayley Hamilton theorem (without proof) and its use in finding inverse of a matrix.	12

BSMO211	Biomolecules	

Teaching Scheme (Hours)		Tea	ching Credit				
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
45	30	00	75	3	1	0	4

Course Pre-	School Level Understanding of Biological molecules and a keen interest in
requisite	learning.
Course Category	Core Professional
Course Focus	Employability
Rationale	Comprehensive understanding of biomolecules, their functions, and
	biological roles. It discusses about the structure, functions, and properties of
	carbohydrates, lipids, nucleic acids, amino acids, proteins, and enzymes,
	providing a foundation in biochemistry and molecular biology for
	understanding life processes.
Course Revision/	09/11/2023
Approval date	
Course Objectives	To enable the student:
(As per Blooms'	1. To understand the structure, function, and properties of carbohydrates and
Taxonomy)	analyze its significance in biological processes.
	2. To remember the structure, functions and classification of lipids.
	3. To understand and remember physical and chemical properties of nucleic
	acids and analyse its significance.
	4. To understand and analyse the structure and function of amino acids.
	5. To understand the nomenclature of enzymes and its significance

Course Content	Weightage	Contact
		Hours
Unit 1: Carbohydrates	20%	9
Structure, Function and properties of Monosaccharides, Disaccharides		
and Polysaccharides, Glycoprotein's and their biological functions.		
Unit 2: Lipids	20%	9
Structure and functions -Classification, nomenclature and properties of		
fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids,		
cerebrosides, gangliosides, Prostaglandins, Cholesterol.		
Unit 3: Nucleic acids	20%	9
Structure and functions: Physical & chemical properties of Nucleic acids,		
Nucleosides & Nucleotides, purines & pyrimidines,. Biologically important		
nucleotides, Double helical model of DNA structure and forces responsible		
for A, B & Z – DNA, denaturation and renaturation of DNA, types of		
RNA.		
Unit 4: Amino acids	20%	9
A historical prospective. Amino acids & Proteins: Structure & Function.		
Structure and properties of Amino acids, Types of proteins and their		

classification. Different Level of structural organization of proteins, Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins.		
Unit 5: Enzymes	20%	9
Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme,		
Cofactors coenzyme, prosthetic groups, metalloenzymes, monomeric &		
oligomeric enzymes and Vitamins.		

List Of Practical	Weightage	Contact
		hours
1. Qualitative test for Carbohydrate: Iodine test	2%	2
2. Qualitative test for Carbohydrate: Benedict test	2%	2
3. Identification of sugars – char (Molisch, Iodine, Benedict, Barfoed,	2%	2
Seiwanoff, Osazone)		
4. Identification of sugars – char (Molisch, Iodine, Benedict, Barfoed,	2%	2
Seiwanoff, Osazone)		
5. Qualitative test for lipids: solubility, transluscent, acrolein, Hubbles test	2%	2
for saturated/unsaturated lipids, saponification, Burchard test for		
cholesterol		
6. Qualitative test for lipids: solubility, transluscent, acrolein, Hubbles test	2%	2
for saturated/unsaturated lipids, saponification, Burchard test for		
cholesterol		
7. Measure Saponification value of oil/fat	2%	2
8. Detection of DNA by Diphenyl Amine method	2%	2
9. Detection of RNA by Orcinol method	2%	2
10. Qualitative test for proteins: Biuret, Nin-hydrin spot, Sulphur	2%	2
11. Detect presence of protein from various samples (egg white,	2%	2
germinating sprouts)		
12. Revision	2%	2
13. Revision	2%	2
14. Revision	2%	2
15. Revision	2%	2

Instructional Method and Pedagogy:Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above cour	rse, students will be able:	
CO1: Understand and analyze the structural diversity of carbohydrates and glycoproteins, and their roles in biological functions.	Understand, Analyse, Remember	Define, Classify & Demonstrate
CO2: Classify lipids by structure and function, analyze their roles in cellular processes, and evaluate essential fatty acids' significance in nutrition and health.	Analyse, Apply, Understand	Classify, Describe & Demonstrate
CO3: Explain the physical and chemical properties of nucleic acids, including DNA structure, RNA types, and the importance of nucleotides.	Understand, remember	Explain, Describe & Demonstrate
CO4: Analyze the historical context of amino acids and proteins, classify proteins, evaluate	Remember, Analyse	Define Describe

their structural organization, and explain denaturation processes.		
CO5: Describe enzyme nomenclature and classification, identify enzyme components, explain cofactors, and evaluate the role of vitamins in enzymatic reactions.	Understand, Apply	Define, Classify, Describe & Demonstrate

Course Pre-	School Level Understanding of Biological molecules pathways and a keen
requisite	interest in learning.
Course Category	Core Professional
Course Focus	Employability
Rationale	This course provides a comprehensive study of cellular metabolism, covering
	the breakdown and synthesis of carbohydrates, lipids, amino acids, and
	nucleotides. Students will gain insights into energy production and
	biomolecule regulation, enhancing their understanding of vital biological
	processes.
Course Revision/	09/11/2023
Approval date	
Course Objectives	To enable the student:
(As per	1. To remember, understand and analyze the knowledge of carbohydrate
Blooms'	metabolism.
Taxonomy)	2. To apply the knowledge of carbohydrate metabolism to explain cellular
	respiration process.
	3. To remember, understand and apply the lipid metabolism.
	4. To remember, understand and apply the amino acid metabolism.
	5. To remember, understand and apply the nucleic acids metabolism.

Course Content	Weightage	Contact
		Hours
Unit 1: Carbohydrate metabolism-I	20%	9
Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions		
and regulation. HMP, PPP, Gluconeogenesis, Glycogenolysis and		
glycogen synthesis.		
Unit 2: Carbohydrate metabolism-II	20%	9
TCA cycle, it's central role, interactions, organization, reactions,		
regulation. Electron Transport Chain, Oxidative phosphorylation		
Unit 3: Lipid metabolism	20%	9
Triglyceride, cholesterol, phospholipid, lipoproteins and		
eicosanoids.ß-oxidation of fatty acids, ketogenesis, Fatty Acid		
synthesis. Synthesis of membrane phospholipids in prokaryotes and		
eukaryotes.		
Unit 4: Amino acid metabolism	20%	9
Nitrogen cycle, incorporation of ammonia into biomolecules.		
Transamination, Deamination and Urea Cycle. Overview of amino		

acid synthesis		
Unit 5: Nucleotide metabolism	20%	9
Metabolic specializations in Microorganisms. De novo synthesis of		
purine and pyrimidine nucleotides. Biosynthesis of		
deoxyribonucleotides

Teaching Scheme (Hours)			Tea	ching Credit			
Lecture	ecture Practical Tutorial Total hours Lecture Practical		Practical	Tutorial	Total Credit		
60	60	00	120	4	2	0	6

Course Pre-requisites	Understanding of basic physics up to school level (10+2 level).
Course Category	Minor (Compulsory)
Course focus	Skill development
Rationale	The fundamental concepts of physics help in understanding the laws of nature and the behaviour of diverse materials under specific conditions. This course is designed to help in understanding the fundamentals of new and emerging technologies that cut across traditional science disciplines, to pursue graduate studies in science.
Course Revision/	
Approval Date:	
Course Objectives	To enable the student to:
(As per Blooms'	1: To understand & remember the basic laws of optical concepts and apply
Taxonomy)	these concepts to understand the working of different optical instruments.
	 To understand & remember the basic quantities governing in the regime of electricity and electronics and analyse respective phenomena in allied areas. To get the knowledge of electromagnetism and their applications. To understand the fundamental building blocks of matter and remember their behaviour to under different conditions. Understand the basics of advanced instrumentation.

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Applied optics	20%	12
Principles of Ray and Wave Optics, Electronic eye, Human eye, Sensors, Optical Microscopic techniques, Optical properties of material: Dielectric constant, refractive index, optical density, birefringence, absorption coefficient, optically sensitive material/system.		
Unit 2: Fundamentals of electricity and electronics	20%	12
Insulators, conductors and semiconductors, current, potential. EMF and resistors, Ohm's law, Kirchhoff's laws, Intrinsic and Extrinsic semiconductors, Diodes (PN, Zener, LED, Photodiode, Solar Cell) & Transistors (BJT) with I-V Characteristics, Photosynthesis, Wearable Electronic devices.		

Unit 3: Electrostatics and Magnetostatics	20%	12
Electrostatic force and electric field, capacitor: Fundamentals & Application, Magnetic force, magnetic field and magnetization, Hall effect, application of hall effect, Piezoelectric Effect, application of piezoelectric effect, Hysteresis. EM Waves, Emission and absorption spectrum, Application of EM Waves.		
Unit 4: Properties of matter	20%	12
States of matter, interconversion, Mechanical properties of matter (strength, hardness, toughness, creep), Elastic modulus, types of elastic modulus, stress-strain diagram, Introduction and application of nano-materials, composite materials, Ecofriendly materials.		
Unit 5: Instrumentation Physics Fundamental of optical microscopy, scanning electron microscopy. transmission electron microscopy, X-ray diffractometer, Raman effect and its applications	20%	12

List Of Practical	Weightage	Contact hours
1: To determine the wavelength of source light and radius of curvature of the given convex lens by measuring the diameters of Newton's rings.	4%	4
2: Determination of wavelength of given light source using spectrometer diffraction grating.	4%	4
3. Measurement of charge and discharge characteristics of a capacitor.	4%	4
4: To plot the I-V characteristics of the solar cell and hence determine the fill factor	4%	4
5. To study the half wave rectifier using diodes.	4%	4
6. To study the full wave rectifier using diodes.	4%	4
7: To measure the Hall voltage, current density and hall coefficient of given semiconductor material.	4%	4
8: Magnetic effect of current: (i) To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph. (ii) Determination of the radius of the coil using a given laboratory setup.	4%	4
9: To determine the magnetic dipole moment of a bar magnet using deflection magnetometer	4%	4
10: To determine the young's modulus of elasticity of given wire using Searl's method	4%	4
11. To determine the young's modulus of elasticity of metal bar	4%	4
12. To determine the concentration of a solution using UV spectroscopy	4%	4
13. Revision of experiments	4%	4
14. Revision of experiments	4%	4

15. Revision of experiments	4%	4

Instructional Method and Pedagogy:

Utilizing models, Power point Presentations, films on various topics of physics, group discussions and seminars are some of the methods adopted to improve the student ability to grasp the principles of physics. The hands-on sessions during laboratory sessions will help students to apply the concepts learnt and analyse the results and draw conclusions.

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students v	vill be able to:	
CO1: Describe & demonstrate the fundamental concept related to optics and working principles of various optical instruments.		Define, Classify, Describe, Demonstrate
CO2: Define & classify different electric and electronic materials and demonstrate & analyse the working of different electronic systems.	I Understand	Define, Classify, Describe, Demonstrate & Examine
CO3: Define the fundamental notions related to electrostatics & magnetostatics and, explain the basics of EM waves, their classification and respective applications.	· ·	Define, Classify, Describe & Demonstrate
CO4: Classify the materials based on their properties an analyse their behaviour under different conditions.	d Understand, Analyse	Classify, Describe, Demonstrate & Examine
CO5: Describe the fundamental notions and workin principles related to the advanced instrumentatio techniques and analyse their applications in allied areas.		Describe & Demonstrate

Course Pre-requisites	
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	 To know the basic values and principles of Social Work To equip candidates with the knowledge of working with people and the ability in problem solving through Field experience To promote among students a sense of commitment and dedication to strive for equity, social justice, social
	 harmony and peace 4. To sensitize the students to involve themselves for the cause of poor, subaltern under privileged and disadvantaged section of the society. 5. To develop confidence among the students to feel themselves as change agents for Social change and transformation.

Course Content	\mathcal{E}	Contact hours
Unit 1: An Introduction to Social Work	20%	6
Theory:		
 Social Work: Concept, Meaning, Definition and Objectives Social Work: Nature, Scope and Functions Emergence of Social Work: UK, USA, India 		
4. Development of Social Work Education in India		
Practical: (Give the list of Experiments)		

Unit 2: Values and Ethics in SocialWork Practice	20%	6
Theory:		
Assumptions and Values of the Social Work		
2. Codes of Ethics		
3. Principles of Social Work		
4. Social Work and its Relation to Human Rights and Social Justice		
Practical: (Give the list of Experiments)		
Unit 3: Social Work Profession in India	20%	6
Theory:		
1. Profession: Meaning Definition and Attributes		
2. Professionalization of Social Workin India		
3. Issues and Challenges before Social Work Profession		
4. Status of Social Work Profession in India		
Practical: (Give the list of Experiments)		
Unit 4: Social Work Philosophy & Methods	20%	6
Theory:		
2. 1. Basic values and Ethics, Philosophy and Principles of social		
work,		
3. Types, Functions and Agencies of social control		
Practical: (Give the list ofExperiments)		
Unit 5: Approaches and Ideologies	20%	6
Theory:		
1. Professional v/s Voluntary Approaches to Social Work		
2. Ideology of Action Groups and Social Movements		
3. Generalist Approach to Social Work Practice		
4. Influence of Political Ideology on Social Welfare Policies and		
Programmes		
Practical: (Give the list of Experiments)		

Instructional Method and Pedagogy: Presentation, Videos, Chalk-Duster and Notes

	1. Social Work curriculum is designed to provide avariety of Opportunities to develop and enhance skills.
Course Outcomes	
	2. The course work will Aid learning, observation and analysis of
	the realities and experience participation in social intervention.
	2. The learner is an appropriate mayor to hains an
	3. The learner is encouraged to move to being an
	independent worker.
	4. Will introduce students to their social responsibilities and
	contribute to the society
	5. will update students on various governmental and non-
	governmental organizations and their workings
Additional Information to	Block Field Work with reputed GOs, NGOs and INGOs
enhance learning

(As per Blooms	 To develop the fundamental understanding of Web Design and learning the development of Professional Website To understand the basics of web design using HTML 5 	
Taxonomy)	 3. To learn the fundamentals of scripting using JavaScript 4. To understand the presentation and design aspects of web page using CSS 5. To learn the website development using Content Management System (CMS) 	

Course Content	Weightage	Contact	
		Hours	
Unit I: Introduction to Web Development	20%	6	
World Wide Web and Hypermedia, Hypertext Design, Introduction to			
HTML, HTML Elements & Tags, Formatting, Links, Images, Tables,			
Web Forms, Form Elements, Formatting Tags, Images, Multimedia			
Unit II: HTML 5	20%	6	
Semantic Elements, Form Elements, Form Attributes,			
Form Input Types, Media Elements, Canvas, SVG			
Unit III: Java Script	20%	6	
Understanding Java Script, Java Script Variables, String, Array, Objects,			
Functions, Conditional Statements, Looping Statement, Understanding			
& Managing the Events, Working with Document Object Model (DOM)			
Unit IV: Cascading Style Sheets(CSS) Introduction, CSS Box Model,	20%	6	
Managing Borders, Backgrounds, Text Effects,			
Transitions, Animation, Multiple Columns, Inline, Internal and			
External CSS			
Unit V: Developing Website using CMS	20%	6	

Introduction of Content Management System(CMS), CMS with	
WordPress, Google Sites, Magento Fundaments of Webhosting	
Introduction to Bootstrap	

Instructional Method and Pedagogy: Demonstration with Hands-on Practice, Powerpoint Presentation

	After the successful completion of this course, students will be able
	to:
	1. Understand the concepts of Website Development
Course Outcomes	
	2. Design Web Site using different presentation styles
	3. Demonstrate the Dynamic Website Development
	4. Understand the concept of Web Hosting and Management

			S				
30	0	0	30	2	0	0	2

Course Pre-requisites	Knowledge and skills of entrepreneurship.
Course Category	Ability Enhancement Compulsory Course
Course focus	Entrepreneurship
Rationale	Entrepreneurs have been instrumental in spurring social change and improving the way people live and work. They help raise the standard of living for everyone by creating jobs and making products safer, less expensive, and more functional.
Course Revision/ Approval	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: Students will develop skills for evaluating, articulating, refining, and pitching a new product or service offering 2: Identify the elements of success of entrepreneurial ventures 3: Analyze Feasibility of the project (Financial and Non-Financial) and interpret business plan. 4: Demonstrate and present successful work, collaboration and division of tasks in a multidisciplinary and multicultural team. 5: Demonstrate understanding and application of the tools necessary to create sustainable and viable Businesses.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Entrepreneurship Concept, knowledge and skills requirement; characteristic of successful entrepreneurs; role of entrepreneurship in economic development; entrepreneurship process; factors impacting mergence of entrepreneurship; managerial vs. entrepreneurial approach and emergence of entrepreneurship. Entrepreneurial Motivation.	20%	6

Unit 2: Creativity and Entrepreneurship Steps in Creativity; Product Design & Influencing Factors (Legal, Ethical & Environmental); Generating business idea –sources of new ideas, methods of generating ideas, creative problem solving, opportunity recognition; environmental scanning, competitor and industry analysis.	20%	6
Unit 3: Feasibility Study (Non-financial Aspects) Market feasibility, Technical feasibility, operational feasibility, Legal feasibility, Human Resource Feasibility, Supply Feasibility.	20%	6
Unit 4:Feasibility Study (financial Aspects) Cost classification- Fixed vs. Variable; Cost Determination- Material, Labour, Overheads; Product Profitability- Concepts of Break-even, Margin of Safety, Angle of Incidence, Key-factor, Profit-Volume ratio; Balance Sheet & Profit & Loss Account- Concepts & Structure; Budgeting; Financing Schemes from Government, specially schemes for women; Venture Capital & Angel Investing	20%	6
Unit 5: Detailed Project Report & Business Plan Project Report- components; Preparation of Business Plan; Pitching the Business Plan, Attracting Angel Investors. (A group of THREE students will prepare a DPR, and Business Plan on selected product or service in the course as a Project/Assignment.	20%	6

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1 Students will develop skills for evaluating, articulating, refining, and pitching a new product or service offering.	Evaluate	Define, Classify and describe
CO2 Identify the elements of success of entrepreneurial ventures	Apply and Understand	Define,Classify, Describe,Demostrate and Examine
CO3 Analyze Feasibility of the project (Financial and Non-Financial) and interpret business plan	Analyse	Define, Classify, Describe, Demostrate
CO4 Demonstrate and present successful work, collaboration and division of tasks in a multidisciplinary and multicultural team.	Create and Understand Create and	and Examine Define, Classify, Describe, Demostrate
CO5: Demonstrate understanding and application of the tools necessary to create sustainable and viable Businesses	Understand	and Examine Define,Describe and Demostrate

Course Pre-requisites	Fundamental concepts of microbial diseases.			
Course Category	Professional Elective Course			
Course focus	Skill development			
Rationale	To have an overview of sample collection and diagnosis of diseases. The subject			
	also explains the staining, serological and molecular methods for identification of disease causing microbes.			
Course Revision/	14/03/2020			
Approval Date:				
Course Objectives (As per Blooms' Taxonomy)	 Remember and Understand To understand diagnosis of diseases Apply To study sample collection and preparation. Analyses To understand microscopic examination and culture. Create To study serological and molecular methods of diagnosis. Understand To understand disease resistance. 			

Course Content (Theory)	Weightage	Contact hours
Unit 1: Importance of Diagnosis of Diseases	20%	6
Bacterial, Viral, Fungal and Protozoan Diseases of various human body		
systems, Disease associated clinical samples for diagnosis.		
Unit 2 Collection of Clinical Samples	20%	6
How to collect clinical samples (oral cavity, throat, skin, Blood, CSF, urine		
and faeces) and precautions required. Method of transport of clinical samples		
to laboratory and storage.		
Unit 3: Direct Microscopic Examination and Culture	20%	6
Examination of sample by staining - Gram stain, Ziehl-Neelson staining for		
tuberculosis, Giemsa-stained thin blood film for malaria Preparation and use		
of culture media - Blood agar, Chocolate agar, Lowenstein-Jensen medium,		
MacConkey agar, Distinct colony properties of various bacterial pathogens.		
Unit 4: Serological and Molecular Methods	20%	6
No of Serological Methods - Agglutination, ELISA, immunofluorescence,		
Nucleic acid-based methods - PCR, Nucleic acid probes, Kits for Rapid		
Detection of Pathogens Typhoid, Dengue and HIV, Swine flu.		

Unit 5: Testing for Antibiotic Sensitivity in Bacteria	20%	6
Importance, Determination of resistance/sensitivity of bacteria using disc		
diffusion method, Determination of minimal inhibitory concentration (MIC)		
of an antibiotic by serial double dilution method.		

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Students will learn disease diagnosis.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Students will learn disease diagnosis.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Students will learn methods employed for disease diagnosis.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Students will learn methods employed for disease diagnosis.	Create	Construct, Develop, Produce
CO5	Applications of basic concepts of microbiology.	Understand	Explain, Describe, outline, Predict, Summarize

BSMB306	BIOFERTILIZERS AND	III
	BIOPESTICIDES	

Teaching Scheme (Hours)					Teac Cre		
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Lutarial			Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	Fundamental knowledge of biofertilizers and their roles and impacts.
Course Category	Professional Elective Course
Course focus	Skill development
Rationale	To have an overview of different types of biofertilizers and biopesticides. The subject also explains the mass production and application of different microbial based biofertilizer.
Course Revision/	14/03/2020
Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	 Remember To understand the basics of biofertilizers and their cultivation. Apply To study about isolation and production of various biofertilizers. Analyses To learn the importance, isolation and application of phosphate solubilizers. Create To study isolation and production of mycorrhizal biofertilizers. Understand To impart knowledge on pesticides, importance bio pesticides and pest control by bio pesticides.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Biofertilizers	20%	8
General account of the microbes used as biofertilizers for various crop plants		
and their advantages over chemical fertilizers. Symbiotic N2 fixers:		
Rhizobium - Isolation, characteristics, types, inoculum production and field		
application, legume/pulses plants Frankia - Isolation, characteristics, Alder,		
Casuarina plants, nonleguminous crop symbiosis. Cyanobacteria, Azolla -		
Isolation, characterization, mass multiplication, Role in rice cultivation, Crop		
response, field application.		
Unit 2: Non - Symbiotic Nitrogen Fixers	16%	5
Free living Azospirillum, Azotobacter - free isolation, characteristics, mass		
inoculums, production and field application.		
Unit 3: Phosphate Solubilizers	16%	5
Phosphate solubilizing microbes - Isolation, characterization, mass inoculum		
production, field application		

Unit 4: Mycorrhizal Biofertilizers Importance of mycorrizal inoculum, types of mycorrhizae and associated plants, Mass inoculum production of VAM, field applications of Ectomycorrhizae and VAM.	20%	6
Unit 5: Administrative Organization and Constitution	20%	6
General account of microbes used as bioinsecticides and their advantages		
over synthetic pesticides, Bacillus thuringiensis, production, Field		
applications, Viruses – cultivation and field applications.		

Instructional Method and Pedagogy:Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Distinguish the types of biofertilizers.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Demonstrate the difference between biofertilizers and chemical fertilizers.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Inculcate the knowledge for isolation and production microorganisms as biofertilizers.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Discuss the importance of mycorrhizal biofertilizers.	Create	Construct, Develop, Produce
CO5	Infer the importance of Biopesticides.	Understand	Explain, Describe, outline, Predict, Summarize

------------------------	--	-----------------

	Teach	ing Scheme ((Hours)		Teac Cre		
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Lutorial			Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	Fundamental knowledge of food fermentation.
Course Category	Professional Elective Course
Course focus	Skill development
Rationale	To have an overview of different types of fermented products. The subject also
	explains the microorganisms involved and fermentation process.
Course Revision/	14/03/2020
Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	 Remember To introduce students to local and foreign fermented foods Apply To provide students with information about the importance or advantages of fermented foods Analyses This paper provides the knowledge of basic principle of fermentation process, which help students to design, develop and operate industrial level fermentation process. Create This fundamental knowledge is essential for the students to make their career in industry based on bioprocess. Understand To understand purpose and functions of fermented foods.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Fermented Foods	20%	6
Definition, types, advantages and health benefits. Milk based fermented		
products Dahi, Yogurt, Buttermilk (Chach) and cheese: Preparation of		
inoculums, types of microorganisms and production process		
Unit 2: Grain based fermented products	20%	6
Soy sauce, Bread, Idli and Dosa: Microorganisms and production process.		
Unit 3 Vegetables based fermented products	20%	6
Pickles, Sauerkraut: Microorganisms and production process.		
Unit 4: Fermented Meat and Fish	20%	6
Types, microorganisms involved, fermentation process.		
Unit 5: Probiotic foods	20%	6
Definition, types, microorganisms and health benefits.		

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Explain processes involved in production of Nigerian and selected foreign fermented foods.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	To classify and explain the different types of fermented foods.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	To produce flow chart for the production processes of fermented foods.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	To be able to use fermentation processes in waste management.	Create	Construct, Develop, Produce
CO5	To be able to describe processing operations involved in enzyme, single cell protein, antibiotics production.	Understand	Explain, Describe, outline, Predict, Summarize

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: History of Development of Microbiology	20%	12
Development of microbiology as a discipline, Spontaneous generation vs.		
biogenesis. Contributions of Anton von Leeuwenhoek, Louis Pasteur, Robert		
Koch, Joseph Lister, Alexander Fleming Role of microorganisms in		
fermentation, Germ theory of disease, Development of various microbiological		
techniques and golden era of microbiology, Development of the field of soil		
microbiology: Contributions of Martinus W. Beijerinck, Sergei N. Winogradsky,		
Selman A.Waksman Establishment of fields of medical microbiology and		
immunology through the work of Paul Ehrlich, Elie Metchnikoff, Edward Jenner.		
Unit 2 Diversity of Microbial World	20%	12
A. Systems of classification:		
Binomial Nomenclature, Whittaker's five kingdom and Carl Woese's three		
kingdom classification systems and their utility. Difference between prokaryotic		
and eukaryotic microorganisms		
B. General characteristics of different groups:		
Acellular microorganisms (Viruses, Viroids, Prions) and Cellular		
microorganisms (Bacteria, Algae, Fungi and Protozoa) with emphasis on		
distribution and occurrence, morphology, mode of reproduction and economic		
importance.		

Unit 3 Algae History of phycology with emphasis on contributions of Indian scientists; General characteristics of algae including occurrence, thallus organization, algae cell ultra structure, pigments, flagella, eyespot food reserves and vegetative, asexual and sexual reproduction. Different types of life cycles in algae with suitable examples: Haplobiontic, Haplontic, Diplontic, Diplobiontic and Diplohaplontic life cycles. Applications of algae in agriculture, industry, environment and food.	20%	12
Unit 4: Fungi Historical developments in the field of Mycology including significant contributions of eminent mycologists. General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra- structure, thallus organization and aggregation, fungal wall structure and synthesis, asexual reproduction, sexual reproduction, heterokaryosis, heterothallism and parasexual mechanism. Economic importance of fungi with examples in agriculture, environment, Industry, medicine, food, biodeterioration and mycotoxins.	20%	12
Unit 5: Protozoa General characteristics with special reference to Amoeba, Paramecium, Plasmodium, Leishmania and Giardia An overview of Scope of Microbiology	20%	12

List Of Practical	Weightage	Conta ct hours
1: Preparation of various media, sterilization and testing for sterility	10%	2
2: Study of Air microflora	10%	4
3: Preparation of Winogredsky's column and study of different groups	12%	4
4. Study of Spirogyra and Chlamydomonas, Volvox using temporary Mounts	12%	4
5. Growth on Sabouraud's agar / PDA and wet mount of fungus	10%	4
6. Study of Rhizopus, Penicillium, Aspergillus using temporary mounts	12%	4
7. Study of the following protozoans using permanent mounts/photographs: Amoeba, Entamoeba, Paramecium and Plasmodium	36%	12

Course Pre-requisites	Fundamental knowledge of concepts related to genes, genomes and				
	chromosomes.				
Course Category	Professional Core Course				
Course focus	Employability				
Rationale	To have an overview of genome organisation of bacteria. The subject also				
	explains mechanisms of genetic exchange in bacteria and transposable				
	elements present in prokaryotes.				
Course Revision/Approval	14/03/2020				
Date:					
Course Objectives	1. Remember Understanding microbial genes, genomes, and gene				
(As per Blooms' Taxonomy)	expression.				
	2. Apply To study basics of Microbiology.				
	3. Analyses To study the biology and evolution of microorganisms and their interactions with the environment.				
	4. Create To learn Microbial replication, transcription and translation.				
	5. Understand To explore about microbial gene organization and Operon; Plasmid; Transduction.				

Course Content (Theory)	Weightage	Contact
	• • • • •	hours
Unit 1: Genome Organization and Genome organization:	20%	12
E. coli, Saccharomyces, Tetrahymena Mutations and mutagenesis: Definition and		
types of Mutations; Physical and chemical mutagens; Molecular basis of		
mutations; Functional mutants (loss and gain of function mutants); Uses of		
mutations. Reversion and suppression: True		
revertant; Intra- and inter-genic suppression; Ames test; Mutator Genes		
Unit 2: Plasmids	20%	12
Types of plasmids – F plasmid, R Plasmids, colicin genic plasmids, Ti plasmids,		
linear plasmids, yeast- 2 µ plasmid, Plasmid replication and partitioning, Host		
range, plasmidincompatibility, plasmid amplification, Regulation of copy		
number, curing of plasmids.		

Unit 3: Mechanisms of Genetic Exchange No. of Transformation - Discovery, mechanism of natural competence. Conjugation - Discovery, mechanism, Hfr and F' strains, Interrupted mating technique and time of entry mapping. Transduction - Generalized transduction, specialized transduction, LFT & HFT lysates, Mapping by recombination and co-transduction of markers.	20%	12
Unit 4: Phage Genetics Features of T4 genetics, Genetic basis of lytic versus lysogenic switch of phage lambda	20%	12
Unit 5: Transposable elements Prokaryotic transposable elements – Insertion Sequences, composite and non- composite transposons, Replicative and Non replicative transposition, Mu transposon. Eukaryotic transposable elements - Yeast (Ty retrotransposon), Drosophila (P elements), Maize (Ac/Ds) Uses of transposons and transposition.	20%	12

List Of Practical	Weightage	Contact hours
1: Study the effect of chemical (HNO2) and physical (UV) mutagens on bacterial cells	10%	4
2: Study survival curve of bacteria after exposure to ultraviolet (UV) light	10%	4
3. Isolation of chromosomal DNA from E. Coli	10%	4
4. Agarose gel electrophoresis of genomic DNA and purity by spectrophotometry	10%	4
5. Isolation of Plasmid DNA from E. coli.	10%	4
6. Study different conformations of plasmid DNA through Agarose gel electrophoresis.	10%	4
7. Demonstration of Bacterial Conjugation	10%	4
8. Demonstration of Bacterial Transformation	10%	4
9. Demonstration of Bacterial Transduction	10%	4
10. Demonstration of AMES test	10%	4

Course Pre-requisites	Fundamental concepts of microbiology.				
Course Category	Professional Core Course				
Course focus	Employability				
Rationale	To have an overview of bacterial systematics and classification. The subject also explains the culture methods and techniques used in microbiology for better understanding of bacterial morphology.				
Course Revision/Approval	14/03/2020				
Date:					
Course Objectives (As per Blooms' Taxonomy)	 Remember To recognize, identify and differentiate the internal and external structures of bacterial cells. Apply To develop basic skills necessary to work with bacterial strains. Analyses To gain understanding of cultivation, preservation and control of bacteria. Create To know general techniques for isolation of pure cultures of bacteria. Understand To identify categories of bacteria and analyze their classification and diversity. 				

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Cell organization	20%	12
Cell size, shape and arrangement, glycocalyx, capsule, flagella, endo flagella,		
fimbriae and pili. Cell-wall: Composition and detailed structure of Gram-positive		
and Gram-negative cell walls, Archaebacterial cell wall, Gram and acid-fast		
staining mechanisms, lipopolysaccharide (LPS), spheroplasts, protoplasts, and L-		
forms. Effect of antibiotics and enzymes on the cell wall. Cell Membrane:		
Structure, function and chemical composition of bacterial and archaeal cell		
membranes. Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid,		
chromosome and plasmids Endospore: Structure, formation, stages of		
sporulation.		

Unit 2: Bacteriological techniques & Microscopy Pure culture isolation: Streaking, serial dilution and plating methods; cultivation, maintenance and preservation/stocking of pure cultures; cultivation of anaerobic bacteria, and accessing nonculturable bacteria. Bright Field Microscope, Dark Field Microscope, Phase Contrast Microscope, Fluorescence Microscope, Confocal microscopy, Scanning and Transmission Electron Microscope	20%	12
Unit 3: Growth, nutrition and Reproduction in Bacteria Nutritional requirements in bacteria and nutritional categories; Culture media: components of media, natural and synthetic media, chemically defined media, complex media, selective, differential, indicator, enriched and enrichment media Physical methods of microbial control: heat, low temperature, high pressure, filtration, desiccation, osmotic pressure, radiation Chemical methods of microbial control: disinfectants, types and mode of action. Asexual methods of reproduction, logarithmic representation of bacterial populations, phases of growth, calculation of generation time and specific growth rate	20%	12
Unit 4: Bacterial Systematics Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences. Differences between eubacteria and archaebacteria	20%	12
Unit 5: Important archae al and eubacterial groups Archaebacteria: General characteristics, phylogenetic overview, genera belonging to Nanoarchaeota (Nanoarchaeum), Crenarchaeota (Sulfolobus, Thermoproteus) and Euryarchaeota [Methanogens (Methanobacterium, Methanocaldococcus), thermophiles (Thermococcus, Pyrococcus, Thermoplasma), and Halophiles (Halobacterium, Halococcus)] Eubacteria: Morphology, metabolism, ecological significance and economic importance of following groups: Gram Negative: Non proteobacteria: General characteristics with suitable examples Alpha proteobacteria: General characteristics with suitable examples Beta proteobacteria: General characteristics with suitable examples Gamma proteobacteria: General characteristics with suitable examples Delta proteobacteria: General characteristics with suitable examples Epsilon proteobacteria: General characteristics with suitable examples Zeta proteobacteria: General characteristics with suitable examples Gram Positive: Low G+ C (Firmicutes): General characteristics with suitable examples Gram Positive: Low G+ C (Firmicutes): General characteristics with suitable examples Gram Positive: An Introduction.	20%	12

List Of Practical	Weightage	Conta ct hours
1: Study of Bacterial structure and morphology: Simple staining, Gram staining, Acid-fast staining (Demo), motility by hanging drop method	20%	8
2: Special staining: Capsule, endospore, metachromatic granule, flagella, Cell wa	20%	8
3. Measurement of cell size by micrometry method	10%	4

4. Pure culture study and biochemical characterization of bacteria (E. coli, S. aureus, Bacillus, Streptococci)	10%	4
5. Isolation and enumeration technique: Serial dilution, Standard Plate Count, Colony Forming Unit	10%	4
6. Preservation by Slant and Glycerol stock	10%	4
7. Isolation of anaerobic bacteria	10%	4
8. Preparation of various media (solid, semi solid, broth, synthetic, complex, defined, enriched media, differential and selective, and enrichment media)	20%	8
9. Isolation of Actinomycetes from soil (slide culture technique)	10%	4

Instructional Method and Pedagogy:

Audiovisuals, Seminars, Quiz, PPT, Demonstration, Case studies

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Describe characteristics of bacterial cells, cell organelles, cell wall composition and various appendages like capsules, flagella or pili.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Describe the nutritional requirements of bacteria for growth.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Differentiate a large number of common bacteria by their salient characteristics; classify bacteria into groups.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Perform basic laboratory experiments to study microorganisms; methods to preserve bacteria in the laboratory; calculate generation time of growing bacteria.	Create	Construct, Develop, Produce
CO5	Develop knowledge and understanding of the bacteria which grow under extreme environments.	Understand	Explain, Describe, outline, Predict, Summarize

Teaching Scheme (Hours)					Teac Cre		
Lecture	Practical	Tutorial	Total Hours	Lactura Practical Lutarial			Total Credit
60	30	0	120	4	2	0	6

Course Pre-requisites	Understanding of basic physics up to school level (10+2 level).
Course Category	Generic Elective
Course focus	Employability
Rationale	To gain basic knowledge of physics.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1:Understand the physical significance of mathematical operations. 2: Employ the knowledge of electrostatics in daily life applications. 3: Understand the basics of magnetostatics and its applications. 4: Remember the laws of thermodynamics and their applications. 5: Explain the thermodynamic potentials and transport properties.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Vector Analysis Scalar and Vector product, gradient, divergence, Curl and their significance, Vector Integration, Line, surface and volume integrals of Vector fields, Gauss- divergence theorem and Stoke's theorem of vectors	12%	6
Unit 2: Electrostatics Electrostatic Field, Electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem - Electric field due to a point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor. Electric potential as a line integral of electric field, electric potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel-plate, spherical and cylindrical condenser. Energy per unit volume in the electrostatic field. Dielectric medium, Polarization, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric	23%	14
Unit 3: Magnetostatics Biot-Savart's law and its applications - straight conductor, circular coil,	23%	14

solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law. Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferromagnetic materials. Electromagnetic Induction: Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in the magnetic field.		
Unit 4:: Laws of Thermodynamics Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamic Processes, Applications of First Law: General Relation between CP and CV, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law and Entropy, Carnot's cycle & theorem, Entropy changes in reversible & irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics, Unattainability of absolute zero	22%	14
Unit 5: Thermodynamic Potentials Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thomson Effect, Clausius-Clapeyron Equation, Expressions for (CP – CV), CP/CV, TdS equations. Kinetic Theory of Gases: Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (without derivation of expressions) and its applications to specific heat of gases; mono-atomic and diatomic gases.	20%	12

List Of Practical	Weightage	Contact
		hours
1: Study of working and characteristics of a Van de Graff generator	8	3
2:Determination of the magnetic moment of a given magnet using magnetometer at Gauss A and Gauss B position using Deflection magnetometer.	14	4
3: Determination of the ratio of magnetic moment of the given bar magnets using Vibration magnetometer.	14	4
4: To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph and calculate the radius of the coil using given laboratory setup.	14	4
5: To verify Stefan-Boltzmann law of thermal radiation by electrical method.	8	3
6: To verify the relation between the thermal emfs of a thermocouple and temperature difference between two hot junctions and verify Seebeck Effect.	14	4
7: Determine the molar heat capacities of air at constant volume Cv and at constant pressure Cp.	14	4
8: To determine the Coefficient of Thermal Conductivity of Copper by Searle's Method.	14	4

Instructional Methodand Pedagogy: (Max. 100 words)
PPT, Demonstration, Video, Case study

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain	
After successfulcompletion of the above course, students will be able to:			
CO1 Describe the physical significance of mathematical operations.	Understanding	Describe	
CO2 Employ the knowledge of electrostatics in daily life	Understandand	Explain and	
applications.	Apply	examine	
CO3 Explain the use of magnetostatics in various applications	Understandand Apply	Explain and examine	
CO4 Interpret the laws of thermodynamics and	Remember and	Define and	
understand its applications	Understand	explain	
CO5 Explain the thermodynamic potentials and transport properties	Understanding	Classify and Explain

Teaching Scheme (Hours)					ching edit		
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Tutorial To			
75	0	15	90	5	0	1	6

Course Pre-requisites	Basic knowledge of algebra and calculus. Basic knowledge of derivatives and integration.
Course Category	Discipline Specific elective course
Course focus	Skill development
Rationale	To gain basic knowledge of mathamatics.
Course Revision/ Approval Date:	14/03/2020
Course Objectives	1: Solve: Make the students familiarise with the ways of solving complicated mathematical problems numerically
(As per Blooms' Taxonomy)	2:Understand: To help them become familiar with MATLAB and other convenient numerical software such as Microsoft Excel and with simple programming
	3: Recognize , Find : Obtain numerical solutions to non-algebraic equations and system of linear equations.
	4: Understand: Describe and understand of the several errors and approximation in numerical methods
	5: Understand, Find: Understanding of several available Solution
	techniques for differential Equations in One Variable. Study of Curve Fitting and Interpolation.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Errors: Notions of round off, truncation and other errors, Errors in numerical computations Solution of Algebraic and Transcendental Equations: Bisection, False position, Iterative Method, Newton Raphson Method, Secant Method. Solution using Matlab	20%	15
Unit 2: Solution of system of Linear Equations: Gauss Elimination method, Gauss Jordan Method, LU decomposition method, Gauss Jacobi Method, Gauss Seidel method. Solution using Matlab	20%	15

Unit 3: Interpolation: Newton's forward and backward interpolation, Newton's divided difference interpolating polynomials, Lagrange Interpolating polynomials. Solution using Matlab.	20%	15
Unit 4: Numerical Differentiation: First and second order differentiation Equations of Equally Spaced Data. Solution using Matlab. Numerical Integration: Trapezoidal rule, Simpson's one third and 3/8th rule. Solution using Matlab	20%	15
Unit 5: Numerical methods for Solution of ordinary differential equation: Taylor's series method, Euler's method, Modified Euler's method, Runge Kutta forth ordered method, Milne's Predictor Corrector Method. Finite element method to solve second order ODE. Solution using Matlab. Curve Fittings: General Linear Least Squares, Fitting of quadratic and exponential curves. Solution using Matlab.	20%	15

List Of Practical Tutorial	Weightage	Contact hours
Unit 1: Introduction to Matlab, Programming using Matlab, Programs for Bisection, Regula-falsi, Secant and Newton-Raphson Method	20%	3
Unit 2: Arrays and Matrices in Matlab, solving system of linear equations using Matlab	20%	3
Unit 3: Difference table, Newton's forward and Backward difference interpolation, Newton's divided difference table, program for Lagrange's interpolation Method	20%	3
Unit 4: Programs on Trapezoidal rule, Simpson's one third and 3/8th rule	20%	3
Unit 5: Programing for euler's Method and 2D and 3D plots	20%	3

Instructional Method and Pedagogy: Chalk board

Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successfulcompletion of the above course, students will be able to:		
CO1 Apply, solve: Apply numerical methods to find out solution of non-algebraic equations using different methods under different conditions, and numerical solution of system of algebraic equations.	Apply Demonstrate Demonstrate	Apply
CO2 Demonstrate, find: Apply various interpolation methods and finite difference concepts		Demonstrate, Fin d, Classify
CO3 Demonstrate: Work out numerical differentiation and integration whenever and wherever routine methods are not applicable		Describe
CO4 Solve: Work numerically on the ordinary differential equations using different methods through the theory of finite differences.	Solve	Solve
CO5 Understand: Work numerically on the partial differential equations using different methods through the theory of finite differences.	Understand	Understand

calculation of absolute entropies of substances.

School of Science B.Sc. Microbiology, Course Curriculum Academic Year, 2023-24

Unit 2:		Ī
Chemical Equilibrium: Free energy change in a chemical reaction. Thermodynamic derivation of the law of chemical equilibrium. Distinction Relationships between Kp, Kc and Kx for reactions involving ideal gases Ionic Equilibria: Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect. Salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts. Buffer solutions. Solubility and solubility product of sparingly soluble salts applications of solubility	20%	12
Unit 3: Functional group approach for the following reactions (preparations & reactions) to be studied in context to their structure. Aromatic hydrocarbons Preparation (Case benzene): from phenol, by decarboxylation, from acetylene, from benzene sulphonic acid. Reactions: (Case benzene): Electrophilic substitution: nitration, halogenation and sulphonation. Friedel- (alkylation and acylation) (up to 4 carbons on benzene). Side chain oxidation of alkyl benzenes (up to 4 carbons on benzene) Alkyl Halides (Up to 5 Carbons) Types of Nucleophilic Substitution (SN1, SN2 and SNi) reactions. Preparation: from alkenes and alcohols. Reactions: hydrolysis, nitrite & nitro formation, nitrile & isonitrile formation. substitution. Aryl Halides Preparation: (Chloro, bromo and iodo-benzene case): from phenol, Sandmeyer & Gattermann reactions. Reactions (Chlorobenzene): Aromatic nucleophilic substitution (replacement by OH group) and effect of nitro substituent. Benzyne Mechanism: KNH2/NH3 (or NaNH2/NH3). Reactivity and Relative strength of C-Halogen bond in alkyl, allyl, benzyl, vinyl and aryl halides	20%	12
Unit 4: Alcohols and Phenols (Up to 5 Carbons) Alcohols: Preparation: hydrolysis, Reduction of aldehydes, ketones, carboxylic acid and esters. Reactions: With sodium, HX (Lucas test), esterification, oxidation (with PCC, alk. KMnO4, acidic dichromate, conc. HNO3). Oppeneauer oxidation Diols: (Upto 6 Carbons) oxidation of diols. Pinacol-Pinacolone rearrangement. Phenols: (Phenol case) Preparation: Cumene hydroperoxide method, from diazonium salts. Reactions: Electrophilic substitution: Nitration, halogenation and sulphonation. ReimerTiemann Reaction, Gattermann-Koch Reaction, Houben Hoesch Condensation, Schotten Baumann Reaction.	20%	12
Unit 5: Ethers (aliphatic and aromatic): Cleavage of ethers with HI. Aldehydes and ketones (aliphatic and aromatic): (Formaldehyde, acetaldehyde, acetone and benzaldehyde) Preparation: from acid chlorides and from nitriles. Reactions Reaction with HCN, ROH, NaHSO3, NH2-G derivatives. Iodoform test. Wittig reaction, Benzoin condensation. Clemensen reduction and Wolff Kishner reduction. Meerwein-Pondorff Verley reduction.	20%	12

Instructional Method and Pedagogy:

PPT, Demonstration, Video, Case study

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1: Interpret the Laws of thermodynamics.	Understanding	Describe
CO2: Explain the free energy changes during chemical equilibria. CO3: Recognise the fundamentals of Organic chemistry, electrophilic and nucleophilic reactions. CO4: Explain the properties, preparation and reactions of alcohols and phenols CO5: Explain the different types of reactions of aldehydes and ketones.	Understandand Apply Understand and Apply Remember and Understand Understanding	Explain and examine Explain and examine Define and explain Classify and Explain

requisites	All'E. E. I
Course Category	Ability Enhancement Compulsory Course.
G	F 1 177
Course focus	Employability
Rationale	Discuss subject importance (Max 100 words)
	The fundamental concepts of environmental studies help in understanding the
	ecosystem and biogeochemical cycle that connects humans with their biosphere.
	Moreover, understanding pollution & treatment to treat a variety of pollution will
	enhance problem-solving skills of the students.
	1 2
Course	14/03/2020
Revision/	
Approval Date:	
Course Objectives	To enable the student to:
(As per Blooms'	1. Remember: To acquire an awareness of and sensitivity to the total
Taxonomy)	environment and its allied problems.
	2. Understand: To make educated judgments about environmental issues.
	3. Apply: Develop skills and a commitment to act independently and
	collectively to environmental sustainability
	4. Analyse: Students can able to debate environmental science with use of
	appropriate scientific information
	5. Create: Engaging with students of all disciplines to think critically,
	ethically, and creatively when evaluating environmental issues.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction of Ecology Ecology-Objectives and Classification Concepts of an ecosystem-structure & function of ecosystem components of ecosystem, Hydrological cycle, carbon cycle, oxygen cycle, Nitrogen cycle, Sulphur cycle	20%	6
Unit 2: Unit 2: Ecological pyramids of various ecosystems Forest Ecosystem, Grassland Ecosystem, Desert Ecosystem, Aquatic ecosystem, Estuarine Ecosystem.	20%	6
Unit 3: Air pollution and its control Introduction, Classification of air pollutants, air pollutants and their effects, acid rain, photochemical smog, particulates. Characteristics and biochemical effects of some important air pollutants, Effect of air pollutants on man and environment, Air quality standard, air monitoring and control of air pollution	20%	6

Unit 4: Water pollution and its control Introduction, Classification of water pollutants, physical, chemical and biological characteristics of waste water, waste water treatment: Primary treatment- Sedimentation, coagulation, equalization, neutralization, secondary treatment-aerobic treatment-aerated lagoons, trickling filter, activated sludge process, oxidation ditch process, oxidation pond, anaerobic treatment-anaerobic sludge digestion, sludge treatment and disposal and tertiary treatment-evaporation, ion exchange, adsorption, chemical precipitation,	20%	6
Unit 5: Solid and hazardous waste: pollution, treatment and disposal Introduction, Classification and origin, characteristics of solid wastes, objectives and considerations in solid waste management, methods of solid waste treatment and disposal - composting, land filling, thermal processes- incineration, pyrolysis, recycling and reuse of solid waste-co-disposal, bioconversion.	20%	6

Instructional Methodand Pedagogy:

Utilizing models, PowerPoint Presentations, group discussions, and seminars are some of the methods adopted to improve the student's ability to grasp the principles of environmental studies.

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Subdomain
After successful completion of the above course, students will be	able to:	
CO1: Skills for identifying environmental problems: Evaluate information from popular electronic and print media	Understand & remember	Define, Classify & Describe
CO2: Interdisciplinary - When encountering environmental problems students will assess necessary scientific concepts and data, consider likely social dynamics, and establish integ cultural contexts	C III C I S tell I C,	Define, Classify, Describe, Demonstrate & & Examine
CO3: Communication - Students will communicate with precision, effective art, and sound rhetoric in writing, in speech, and in digital media	Understand, Remember & Apply	Define, Classify, Describe & Demonstrate
CO4: Research - When faced with questions that lie	Understand,	Define, Classify,

beyond their current knowledge base, students will actively research data, concepts, histories, and narratives necessary for adequate consideration of the issue.	Remember, Apply & Analyse	Describe, Demonstrate & Examine
CO5: Intellectual Flexibility - Students will possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.	Understand, Remember, Analyse & Apply	Define, Describe & Demonstrate

2	0	0	2	2	0	0	2

Course Pre-requisites	Fundamental concepts of microbial diseases.				
Course Category	Professional Elective Course				
Course focus	Employability				
Rationale	To have an overview of different microbial diseases. The subject also				
	explains the therapeutics and prevention of microbial diseases.				
Course Revision/Approval	14/03/2020				
Date:					
Course Objectives	6. Remember and Understand To introduce basic principles and				
(As per Blooms' Taxonomy)	application relevance of clinical disease for students who are in				
	preparation for physicians.				
	7. Apply The content of rigorous course includes many				
	etiological agents responsible for global infectious diseases.				
	8. Analyses It covers all biology of bacteria, viruses and other				
	pathogens related with infectious diseases in humans.				
	9. Create The course will provide the conceptual basis for				
	understanding pathogenic microorganisms and particularly				
	address the fundamental mechanisms of their pathogenicity.				
	10. Understand It will also provide opportunities for a student to				
	develop diagnostic skills in microbiology, including the practical				
	application and interpretation of laboratory tests for the diagnosis				
	of infectious diseases.				
	of infectious diseases.				

Course Content (Theory)	Weightage	Contact hours
Unit 1: Human Diseases	20%	6
Infectious and noninfectious diseases, microbial and non- microbial diseases,		
Deficiency diseases, occupational diseases, Incubation period, mortality rate.		
Unit 2: Microbial diseases	20%	6
Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous		
system diseases, skin, diseases, eye diseases, urinary tract diseases, sexually		
transmitted diseases: Types, route of infection, clinical systems and general		
prevention methods, study of recent outbreaks of human diseases (SARS) –		
causes, spread and control, Mosquito borne disease – Types and prevention.		

Unit 3: Therapeutics of Microbial diseases	20%	6
Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins),		
quinolones, polypeptides and aminoglycosides. Judicious use of antibiotics,		
importance of completing antibiotic regimen, Concept		
of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR		
microbial strains. Treatment using antiviral agents: (a n y on e ou t of		
Amantadine, Acyclovir, Azidothymidine). Concept of HAART		
Unit 4: Prevention of Microbial Diseases	20%	6
General preventive measures, Importance of personal hygiene, environmental		
sanitation and methods to prevent the spread of infectious agents transmitted by		
direct contact, food, water and insect vectors.		
Unit 5: Prevention of Microbial Diseases	20%	6
Vaccines: Importance, types, vaccines available against microbial diseases,		
vaccination schedule (Compulsory and preventive) in the Indian context.		

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Understand classical and molecular determinants of disease-causing microbes	Understand and Remember	Explain, Describe, Discuss, Recall, Locate
CO2	To describe the characteristics of newer disease-causing bacteria and viruses	Create and Apply	Apply, Practice, Interpret, Select, Correlate
CO3	To study and critique the various molecular tools available to work on the molecular epidemiology of disease-causing microorganisms	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	To study and evaluate mechanisms underlying resistance of bacteria to antibiotics, spread of resistance and the use of newer vaccines to control infectious diseases	Analyses and Evaluation	Construct, Develop, Produce
CO5	To gather information as to how the infectious diseases may be diagnosed using newer diagnostic tools and what automated equipment are available for use in diagnostic microbiology laboratories.	Understand	Explain, Describe, outline, Predict, Summarize

Course Pre-requisites	Fundamental knowledge of biofertilizers and their roles and impacts.				
Course Category	Professional Elective Course				
Course focus	Employability				
Rationale	To have an overview of safe practices in food and pharmaceutical				
	industries. The subject also explains the techniques for determining				
	microbial load in food and pharmaceutical products. Along with this, the				
	subject also explains the food safety standards.				
Course Revision/Approval	14/03/2020				
Date:					
Course Objectives	6. Remember Demonstrate theory and practical skills in				
(As per Blooms' Taxonomy)	6. Remember Demonstrate theory and practical skills in microscopy and their handling techniques and staining				
	Procedures.				
	7. Apply Know various Culture media and their applications				
	and also understand various physical and chemical means of				
	sterilization.				
	8. Analyses Know General bacteriology and microbial				
	techniques for isolation of pure cultures of bacteria, fungi				
	1				
	and algae.				
	9. Create To understand the basics of microbiology and				
	biochemistry.				
	10. Understand To understand the rule and regulations of FDA.				

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microbiological Laboratory and Safe Practices.	20%	8
Good laboratory practices - good laboratory practices, Good microbiological		
practices Biosafety cabinets - Working of biosafety cabinets, using protective		
clothing, specification for BSL-1, BSL-2, BSL-3. Discarding biohazardous waste		
- Methodology of Disinfection, Autoclaving & Incineration.		
Unit 2: Determining Microbes in Food / Pharmaceutical Samples	16%	5
Culture and microscopic methods - Standard plate count, most probable		
numbers, Direct microscopic counts		
Unit 3: Determining Microbes in Food / Pharmaceutical Samples	16%	5
Biochemical and immunological methods: Limulus lysate test for endotoxin, gel		
diffusion, sterility testing for pharmaceutical products. Molecular methods -		
Nucleic acid probes, PCR based detection, biosensors.		

Unit 4: Pathogenic Microorganisms of Importance in Food & Water Enrichment culture technique, Detection of specific microorganisms - on XLD agar, Salmonella Shigella Agar, Mannitol salt agar, EMB agar, McConkey Agar,	20%	6
Saborad Agar Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centers (COB, 10 min Resazurin assay)		
Unit 5: HACCP for Food Safety and Microbial Standards Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations Microbial Standards for Different Foods and Water – BIS standards for common foods and drinking Water.	20%	6

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Students will gain knowledge about the different cell organelles of microorganisms and their detailed functions	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Students will gain knowledge about the different cell organelles of microorganisms and their detailed functions	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Students will also study the growth and control of microbes as well as different bacteriological techniques involved in microbiology	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Students will also study the growth and control of microbes as well as different bacteriological techniques involved in microbiology	Create	Construct, Develop, Produce
CO5	Students will learn about the biomolecules by studying their structures and types.	Understand	Explain, Describe, outline, Predict, Summarize

Course Objectives	mambar Basia Imayyladga about migrahialagy highlysical tachniques		
(As per Blooms' Taxonomy)	member Basic knowledge about microbiology, biophysical techniques, biochemistry, cell biology, molecular biology, cancer biology, metabolic disorders etc.		
	ply To create awareness to become conscious citizens with a sense of responsibility towards their surrounding irrespective of any manmade differences.		
	alyses To expose students to the field of microbiology and other allied life science subjects.		
	eate Have developed a very good understanding of how analysis of water, air and soil contribute to control of environmental pollution.		
	derstand Have developed a very good understanding and skills of the analysis of air, water and soil.		

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Aero microbiology	20%	6
Bioaerosols, Air borne microorganisms (bacteria, Viruses, fungi) and their		
impact on human health and environment, significance in food and pharma		
industries and operation theatres, allergens.		
Unit 2: Air Sample Collection and Analysis	20%	6
Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for		
bacteria and fungi, Identification characteristics.		
Control Measures Fate of bioaerosols, inactivation mechanisms - UV light,		
HEPA filters, desiccation, Incineration		
Unit 3 Water Microbiology	20%	6
Water borne pathogens; water borne diseases.		

Unit 4: Microbiological Analysis of Water Sample	20%	6
Collection, Treatment and safety of drinking (potable) water, methods to detect		
potability of water samples: (a) standard qualitative procedure:		
presumptive/MPN tests, confirmed and completed tests for fecal coliforms (b)		
Membrane filter technique and (c) Presence/absence tests.		
Unit 5: Control Measures	20%	6
Precipitation, chemical disinfection, filtration, high temperature, UV light.		

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Acquire knowledge on fundamentals of Microbiology.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Understand details of bacterial, fungal, algal and viral morphology and physiology.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Gain insight into the various aspects of microbial genetics.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Assimilate technical skills on microbial genetics and molecular biology.	Create	Construct, Develop, Produce
CO5	Realize the principles of prevention and treatment of microbial diseases.	Understand	Explain, Describe, outline, Predict, Summarize

4	4	0	8	4	2	0	6

Course Pre-requisites	Fundamental knowledge of industrial use of microorganisms.			
Course Category	Professional Core Course			
Course focus	Employability			
Rationale	To have an overview and understanding of industrially important microorganisms. The subject also explains the different types of fermentation processes, bioreactors and production of microbial products.			
Course Revision/Approval	14/03/2020			
Date:				
Course Objectives (As per Blooms' Taxonomy)	 Remember To explore historical Development of Microbiology. Apply To study basics of Microbiology. Analyses To study microbial classification. Create To determine microbial importance at social and economic level. Understand To explore the scopes of microbiology. 			

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction to industrial microbiology Brief history and developments in industrial microbiology.	5%	5
Unit 2: Isolation of industrially important microbial strains and	25%	15
fermentation media		
Sources of industrially important microbes and methods for their isolation,		
preservation and maintenance of industrial strains, strain improvement, Crude		
and synthetic media; molasses, cornsteep liquor, sulphite waste liquor, whey,		
yeast extract and protein hydrolysates.		
Unit 3: Types of fermentation processes, bio-reactors and measurement of	25%	20
fermentation		
Parameters and Down-stream processing. Types of fermentation processes -		
Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-		
batch (eg. baker's yeast) and continuous fermentations Components of a typical		
bio-reactor, Types of bioreactorsLaboratories, pilot- scale and production		
fermenters, constantly stirred tank and air-lift fermenters, Measurement and		
control of fermentation parameters - pH, temperature, dissolved oxygen, foaming		
and aeration. Cell disruption, filtration, centrifugation, solvent extraction,		
precipitation, lyophilization and spray drying.		
Unit 4: Microbial production of industrial products	25%	15
(microorganisms involved, media, fermentation conditions, downstream		
processing and uses) Citric acid, ethanol, penicillin, glutamic acid, Vitamin B12		
Enzymes (amylase, protease, lipase) Wine, beer.		

Unit 5: Enzyme immobilization		5
Methods of immobilization, advantages and applications of immobilization, large		
scale applications of immobilized enzymes (glucose isomerase and penicillin		
acylase).		

List Of Practical	Weightage	Contact
		hours
1. Screening and Isolation of industrially important microorganism from	10%	4
natural resource (enzyme/ antibiotic/organic acid producer)		
2. Calculation of thermal death point (TDP) of a microbial sample.	10%	4
3. Study parts of bioreactor and its design	10%	4
4. Measure the dissolve oxygen in the fermentation broth	10%	4
5. Preparation of Inoculum (cell count of yeast cell using	10%	4
haemocytometer)		
6. Preparation of fermentation media	10%	4
7. Product recovery and Purification	10%	4

Course Pre-requisites	Fundamental knowledge of genes, genomes and genetic engineering.
Course Category	Professional Core Course
Course focus	Employability
Rationale	To have an overview of different molecular tools and applications. The subject also explains genetic engineering in plants and animals.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	 Remember To learn mechanisms of gene cloning. Apply Practical aspects of recombinant DNA technology. Analyses Practical aspects of recombinant DNA technology. Create Model organisms in recombinant DNA technology Understand Recombinant gene expression system.

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Theory: Molecular tools and applications- restriction enzymes, ligases, polymerases, alkaline phosphatase. Gene Recombination and Gene transfer: Transformation, Episomes, Plasmids and other cloning vectors (Bacteriophage-derived vectors, artificial chromosomes), Microinjection, Electroporation, Ultrasonication.	20%	12
Unit 2: Theory Principle and applications of Polymerase chain reaction (PCR), primerdesign, and RT- (Reverse transcription) PCR. Restriction and modification system, restriction mapping. Southern and Northern hybridization. Preparation and comparison of Genomic and cDNA library, screening of recombinants, reverse transcription.	20%	12

Unit 3: Theory Genome mapping, DNA fingerprinting, Applications of Genetic Engineering in animals: Production and applications of transgenic mice, role of ES cells in gene targeting in mice. Therapeutic products produced by genetic engineeringblood proteins, human hormones, immune modulators and vaccines (one example each).	20%	12
Unit 4: Theory Random and site-directed mutagenesis: Primer extension and PCR based methods of site directed mutagenesis, Random mutagenesis, Gene shuffling, production of chimeric proteins, Protein engineering concepts and examples (any two).	20%	12
Unit 5: Theory Genetic engineering in plants: Use of Agrobacterium tumefaciens and A. rhizogenes, Ti plasmids, Strategies for gene transfer to plant cells, Direct DNA transfer to plants, Gene targeting in plants, Use of plant viruses as episomal expression vectors.	20%	12

List Of Practical	Weightage	Contact hours
1. Isolation of chromosomal DNA from E. coli	20%	12
2. Plasmid DNA isolation		
3. Qualitative and quantitative analysis of DNA using spectrophotometer		
4. Demonstration of PCR	20%	12
5. Making competent cells		
6. Transformation of competent cells		
7. Restriction digestion of DNA	20%	12
8. Demonstration of Agarose gel electrophoresis.	20%	12
9. Isolation of chromosomal DNA from plant cells.	20%	12

Instructional Method and Pedagogy: Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1 Explain the mechanisms of gene cloning.	Understand and Analyse	Explain, Describe, Discuss, Recall, Locate
CO2 Explain the mechanisms of gene cloning.	Apply and create	Apply, Practice, Interpret, Select, Correlate
CO3 Discuss the practical aspects of applying recombinant DNA technology.	Remember	Compare, Classify, Select, Investigate
CO4 Discuss the practical aspects of applying recombinant DNA technology.	Understand and evaluate	Construct, Develop, Produce
CO5 Explain the significance of model organisms in recombinant DNA technology, describe recombinant gene expression systems.	Create	Explain, Describe, outline, Predict, Summarize

BSMB403	MICROBIAL PHYSIOLOGY	IV

Teaching Scheme (Hours)					Teachin	g Credit	
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Tutorial			Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Fundamental concepts of microbial growth, nutrition and biochemistry.				
Course Category	Professional Core Course				
Course focus	Employability				
Rationale	To have an overview of microbial growth and physiological processes.				
	The subject also explains the nutrient uptake and transport mechanism in				
	microorganisms.				
Course Revision/Approval	14/03/2020				
Date:					
Course Objectives (As per Blooms' Taxonomy)	 Remember To learn about the major features of growth and metabolism of microorganisms, and microbial relationships. Apply To study determination of growth curve environmental influence on the microbial growth. Analyses To study the biology and evolution of microorganisms and their interactions with the environment. Create To learn about and primary and secondary metabolism. Understand To explore about energy source for microorganisms and relationship between metabolism and energy source. 				

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Microbial Growth and Effect of Environment on Microbial Growth.	20%	12
Definitions of growth, measurement of microbial growth, Batch culture,		
Continuous culture, generation time and specific growth rate, synchronous		
growth, diauxic growth curve. Microbial growth in response to environment -		
Temperature (psychrophiles, mesophiles, thermophiles, extremophiles,		
thermodurics, psychrotrophs), pH (acidophiles, alkaliphiles), solute and water		
activity (halophiles, xerophiles, osmophilic), Oxygen (aerobic, anaerobic,		
microaerophilic, facultative aerobe, facultative anaerobe), barophilic. Microbial		
growth in response to nutrition and energy - Autotroph/Phototroph, heterotrophy,		
Chemolitho-autotroph, Chemolitho-heterotroph, Chemo-heterotroph,		
Chemolithotroph, photolithoautotroph, Photoorganoheterotroph.		
Unit 2: Nutrient uptake and Transport	20%	12
Passive and facilitated diffusion. Primary and secondary active transport,		
concept of uniport, symport and antiport. Group translocation, Iron uptake.		

Applied William	EDUCATION RE-ENVISIO	necu
Unit 3: Chemoheterotrophic Metabolism- Aerobic Respiration.	20%	12
Concept of aerobic respiration, anaerobic respiration and fermentation, Sugar		
degradation pathways i.e., EMP, ED, Pentose phosphate pathway, TCA cycle.		
Electron transport chain: components of respiratory chain, comparison of		
mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers		
and inhibitors.		
Unit 4: Chemoheterotrophic Metabolism- Anaerobic respiration	20%	12
and fermentation		
Anaerobic respiration with special reference to dissimilatory nitrate reduction		
(Denitrification; nitrate/Nitrite and nitrate/ammonia respiration; fermentative		
nitrate reduction). Fermentation - Alcohol fermentation and Pasteur effect;		
Lactate fermentation (homofermentative and heterofermentative pathways),		
concept of linear and branched fermentation pathways		
Chemolithotrophic and Phototrophic Metabolism Introduction to aerobic and		
anaerobic chemolithotrophy with an example each. Hydrogen oxidation		
(definition and reaction) and methanogenesis (definition and reaction)		
Introduction to phototrophic metabolism - groups of phototrophic		
microorganisms, anoxygenic vs. Oxygenic photosynthesis with reference to		
photosynthesis in green bacteria, purple bacteria and cyanobacteria.		
Unit 5: Nitrogen Metabolism - an overview	20%	12
Introduction to biological nitrogen fixation Ammonia assimilation Assimilatory		
nitrate reduction, dissimilatory nitrate reduction, denitrification.		

List Of Practical	Weightage	Contact hours
1. Study and plot the growth curve of E. coli by turbidometry and	10%	4
standard plate count methods.		
2. Calculations of generation time and specific growth rate of bacteria	10%	4
from the graph plotted with the given data.		
3. Diauxic growth curve of E. Coli (Lac Operon)	10%	4
4. Effect of desiccation/drying on the growth of bacteria	10%	4
5. Effect of temperature on growth of E. coli and S. aureus	10%	4
6. Effect of pH on growth of E. coli and S. aureus	10%	4
7. Effect of Temperature, pH, concentration of salt (NaCl) and Sugar	10%	4
(glucose) on growth of E. coli and S. aureus (Turbidimetry)		
8. Effect of carbon and nitrogen sources on growth of E. coli.	10%	4
9. Effect of salt on growth of E. coli.	10%	4
10. Single Enzyme test: (Catalase test, Coagulase test, Oxidase test,	10%	4
Indole test, ONPG (O-nitrophenyl-beta-D-galactopyranoside), Urease		
11. Metabolic Pathway:	10%	4
Carbohydrate fermentation/ Oxidation- fermentation test		
(Oxidative fermentative -medium -CDC test, -Carbohydrate fermentation on TSI -MR/VP test		

	THE REAL PROPERTY.	EJUGATUR DE-CRYSTO	ecu.
12. Decarboxylase/Di hydrolase test			
Deaminase reaction test (Phenylalanine agar)			
Lysine decarboxylase test			
Citrate Utilization (Simmons citrate agar)			
Nitrate reduction test			
Gelatin liquification test			

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Describing the growth characteristics of the microorganisms capable of growing under unusual environmental condition of temperature, oxygen, and solute and water activity	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Describing the growth characteristics of the microorganisms capable of growing under unusual environmental condition of temperature, oxygen, and solute and water activity	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Differentiating concepts of aerobic and anaerobic respiration and how these are manifested in the form of different metabolic pathways in microorganisms	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Differentiating concepts of aerobic and anaerobic respiration and how these are manifested in the form of different metabolic pathways in microorganisms	Create	Construct, Develop, Produce
CO5	Describing the growth characteristics of the microorganisms which require different nutrient for growth and the associated mechanisms of energy generation for their survival like autotrophs, heterotrophs, chemolithoautotrophs etc	Understand	Explain, Describe, outline, Predict, Summarize

Teaching Scheme (Hours)				Teaching	Credit		
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Fundamental knowledge of concepts related to physics up to school				
	(10+2) level.				
Course Category	Professional Elective Courses (PEC)				
Course focus	Employability				
Rationale	Discuss subject importance (Max 100 words)				
	The fundamental concepts of physics help in understanding the				
	laws of nature and the behaviour of different physical				
	entities/phenomena under specific conditions. This understanding				
	when applied to solve numerical problems will help in enhancing				
	the aptitude and problem-solving skills of the students.				
Course Revision/	14/03/2020				
Approval Date:					
Course Objectives	To enable the student to:				
(As per Blooms'	1: To understand & remember fundamental principles of waves				
Taxonomy)	mechanics.				
	2: To understand, remember and analyse different concepts				
	related to the modern theory of radiation.				
	3: To understand the basic concepts related to wave mechanics				
	and apply & assess the phenomenon using experimental setup.				
	4: To understand the concepts related to diffraction thereby its				
	application & analyse of the phenomenon using experimental				
	setup.				
	5: To understand, remember and analyse the phenomenon related				
	to electromagnetic wave propagation.				

Course Content (Theory)	Weightage	Contact hours
Unit 1: Wave Motion Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity. Plane waves. Spherical waves, Wave intensity.	10%	6

Unit 2: Theory of Radiation		
Blackbody radiation, Spectral distribution, Concept of Energy Density, Derivation of Planck's law, Deduction of Wien's distribution law, Rayleigh-Jeans Law, Stefan Boltzmann Law and Wien's displacement law from Planck's law. Fundamentals of electromagnetic radiation and related	20%	12
spectrum. Overview of basic applications of Electromagnetic radiation. LASERs, and related safety aspects. Optical Fibers and their applications.		
Unit 3: Wave Optics		
Electromagnetic nature of light. Definition and Properties of wavefront. Huygens Principle. Interference: Interference: Division of amplitude and division of wavefront. Young's Double Slit experiment. Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: measurement of wavelength and refractive index. Michelson's Interferometer: (1) Idea of form of fringes (no theory needed), (2) Determination of wavelength, (3) Wavelength difference, (4) Refractive index, and (5) Visibility of fringes.	30%	18
Unit 4: Wave Optics Diffraction: Fraunhofer diffraction - Single slit; Double Slit. Multiple slits and Diffraction grating. Fresnel Diffraction: Halfperiod zones. Zone plate. Fresnel Diffraction pattern of a straight edge, a slit and a wire using halfperiod zone analysis. Polarization: Transverse nature of light waves. Plane polarized light — production and analysis. Circular and elliptical polarization	20%	12
Unit 5: Maxwell's equations and Electromagnetic wave propagation Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.	20%	12

List of Practical	Weightage	Contact hours
1: Sonometer: To determine the frequency of A.C. Mains using Sonometer.	8%	3
2: Melde's Experiment: To determine the frequency of an electrically maintained tuning fork by transverse and longitudinal mode of vibration.	12%	4
3: Stefan-Boltzmann's law: To verify Stefan-Boltzmann law of thermal radiation by electrical method.	8%	3
4: Newton's ring: To determine the wavelength of source light and radius of curvature of the given convex lens by measuring the diameters of Newton's rings.	14%	4
5: Michelson's Interferometer: Using Michelson's Interferometer to determine the refractive index of a glass plate.	14%	4
6: Diffraction Grating - Determining wavelength of a given light source using a diffraction grating.	14%	4

7: To study variation of refractive index with (a) temperature of the liquid sample. (b) wavelength of the light source.	14%	4
8: Spectrometry: (i) Determination of angle of Prism. (ii) Determination of refractive index of prism using spectrometer.	14%	4

Utilizing models, Powerpoint Presentations, films on various topics of physics, group discussions and seminars are some of the methods adopted to improve the student ability to grasp the principles of physics. The hands-on sessions during laboratory sessions will help students to apply the concepts learnt and analyse the results and draw conclusion.

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1 The students will be able to understand & remember fundamental principles of waves mechanics.	Understand & remember	Define, Classify & Describe
CO2 The students will be able to understand , remember and analyse different concepts related to the modern theory of radiation.	Understand, remember & analyse	Define, Classify, Describe & Examine
CO3 The student will be able to understand the basic concepts related to wave mechanics and apply & assess the phenomenon using experimental setup.	Understand, apply and analyse	Define, Describe, Demonstrate & Examine
CO4 The students will be able to understand the concepts related to diffraction thereby its application & analyse of the phenomenon using experimental setup.	Understand, apply and analyse	Define, Describe, Demonstrate & Examine
CO5 The students will be able to understand , remember and analyse the phenomenon related to electromagnetic wave propagation.	Understand, remember and analyse	Define, Describe & Examine

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	00	120	04	02	00	06

Course Pre-requisites	Basic knowledge of physical and organic chemistry
Course Category	Generic elective
Course focus	Employability
Rationale	Fusion of various sciences is occurring at a rapid pace. Biochemists and microbiologists need indepth knowledge in Chemistry. To fill this gap the course, namely, Chemistry II, is inducted into the curriculum.
Course Revision/ Approval Date:	14/03/2023
Course Objectives (As per Blooms' Taxonomy)	 To impart the knowledge of solution state and the laws governing thereof. To equip the students with the indepth knowledge of Phase equilibria and their industrial relevance To make the students skilled in operating electroanalytical devices, like, pH meter, potentiometer and conductometery by imparting fundamental knowledge of electrochemistry To impart knowledge pertaining to carboxylic acids, Amines and diazonium Salts. To equip the students with knowledge of amino acids, peptides and proteins and the properties and conversions thereof.

Course Content (Theory)	Weightage %	Contact hours
Unit 1: Solutions Thermodynamics of ideal solutions: Ideal solutions and Raoult's law, deviations from Raoult's law – non-ideal solutions. Vapour pressure-composition and temperaturecomposition curves of ideal and non-ideal solutions. Distillation of solutions. Lever rule. Azeotropes. Partial miscibility of liquids: Critical solution temperature; effect of impurity on partial miscibility of liquids. Immiscibility of liquids-Principle of steam distillation. Nernst distribution law and its applications, solvent extraction.	20	12

Unit 2: Phase Equilibrium Phases, components and degrees of freedom of a system, criteria of phase equilibrium. Gibbs Phase Rule and its thermodynamic derivation. Derivation of Clapeyron-Clausius equation and its importance in phase equilibria. Phase diagrams of one-component systems (water and sulphur) and two component systems involving eutectics, congruent and	20	12
Incongruent melting points (lead-silver, FeCl ₃ - H ₂ O and Na-K. Unit 3: Conductance Conductivity, equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes. Kohlrausch law of independent migration of ions. Transference number and its experimental determination using Hittorf and Moving boundary methods. Ionic mobility. Applications of conductance measurements: determination of degree of ionization of weak electrolyte, solubility and solubility products of sparingly soluble salts, ionic product of water, hydrolysis constant of a salt. Conductometric titrations Electrochemistry Reversible and irreversible cells. Concept of EMF of a cell. Measurement of EMF of a cell. Nernst equation and its importance. Types of electrodes. Standard electrode potential. Electrochemical series. Thermodynamics of a reversible cell, calculation of thermodynamic properties: G, H and S from EMF data. Calculation of equilibrium constant from EMF data. Concentration cells with transference and without transference. Liquid junction potential and salt bridge. pH determination using hydrogen electrode and quinhydrone electrode. Potentiometric titrations -qualitative treatment (acid-base and oxidation-reduction).	/ 11	12
Unit 4: Functional group approach for the following reactions (preparations & reactions) to be studied in context to their structure. Carboxylic acids and their derivatives Carboxylic acids (aliphatic and aromatic) Preparation: Acidic and Alkaline hydrolysis of esters. Reactions: Hell – Volhard - Zelinsky Reaction. Carboxylic acid derivatives (aliphatic): (Upto 5 carbons) Preparation: Acid chlorides, Anhydrides, Esters and Amides from acids and their interconversion. Reactions: Comparative study of nucleophilicity of acyl derivatives. Reformatsky Reaction, Perkin condensation. Amines and Diazonium Salts Amines (Aliphatic and Aromatic): (Upto 5 carbons) Preparation: from alkyl halides, Gabriel's Phthalimide synthesis, Hofmann Bromamide reaction. Reactions: Hofmann vs. Saytzeff elimination, Carbylamine test, Hinsberg test, with HNO2, Schotten – Baumann Reaction. Electrophilic substitution (case aniline): nitration, bromination, sulphonation. Diazonium salts: Preparation: from aromatic amines. Reactions: conversion to benzene, phenol, dyes.	20	12
Unit 5: Amino Acids, Peptides and Proteins: Preparation of Amino Acids: Strecker synthesis using Gabriel's phthalimide synthesis.	20	12

Zwitterion, Isoelectric point and Electrophoresis. Reactions of Amino acids: ester of -COOH group, acetylation of -NH₂ group, complexation with Cu²⁺ions, ninhydrin test. Overview of Primary, Secondary, 20% 12 Activating Prior Knowledge by Random Questioning, Introducing the topic to be taught after getting the expected response from the students, Developing hypothesis by Lecture and Discussion, Quizzes Intended to Consolidate Knowledge (QUICK) Curriculum, B.Sc. Biotechnology, School of Science Page 66 of 94 Tertiary and Quaternary Structure of proteins. Determination of Primary structure of Peptides by degradation Edmann degradation (Nterminal) C-terminal (thiohydanto in carboxypeptidase enzyme). Synthesis of simple peptides (upto dipeptides) by N-protection (t-butyloxycarbonyl and phthaloyl) & and Merrifield solid-phase synthesis. activating groups Carbohydrates: Classification, and General Properties, Glucose and Fructose (open chain and cyclic structure), Determination of configuration of monosaccharides, absolute configuration of Glucose and Fructose, Mutarotation, ascending and descending in monosaccharides. Structure of disacharrides (sucrose, cellobiose, lactose) and polysacharrides (starch and cellulose) maltose, excluding their structure elucidation

List of Practicals	Weightage	Contact hours
1. To determine the relative viscosity of ethyl acetate with water using Ostwald's viscometer	15	4
2. To determine the Critical Micellar Concentration (CMC) of a given surfactant Sodium Dodecyl Sulphate (SDS) using conductivity method	15	4
3. To study the effect of temperature on rate of reaction between hypo solution and HCl	15	4
4. To prepare sodium tris-oxalato ferrate (III)	15	4
5. Preparation of ammonium nickel (II) sulfate hexahydrate, (NH ₄) ₂ Ni(SO ₄) ₂ . 6H ₂ O	15	4
6. To prepare hexakis thiourea plumbus (II) nitrate hexahydate	15	4
7. To prepare tetraamine copper sulphate	10	4

Instructional Method and Pedagogy:

Classroom lecture, discussion, question and answer method, Case studies, quizes, presentations, role play, expert lecture(Consultant)

Course outcomes:	Blooms' Taxonomy Domain	Blooms' Taxono my Sub Domain
After successful completion of the above course, students will be able to:		
CO1: Understand the laws governing the solution state and apply the same for practical utility	Understand and apply	
CO2: Understand phase rule, phase equilibria, phase diagrams and their industrial utility	Understand and apply	
CO3: Understand and apply the concepts of electrochemistry	Understand and apply	
CO4: Synthesize and convert amino acids, diazonium sales and carboxylic acids	Create	
CO5: Synthesize amino acids, peptides and proteins and study their properties and conversions thereof.	Create

Course Objectives	To enable the student to:					
(As per Blooms' Taxonomy)	1. Recognize: Identify and develop operational research models from the					
	verbal description of the real system.					
	2 Understand: Understand the mathematical tools that are needed to					
	solve optimization problems.					
	3. Solve: Use optimization techniques to solve the proposed models.					
	4. Solve: Develop a report that describes the model and the solving					
	technique, analyse the results					
	5. Understand: To understand the decision-making processes in					
	Management Engineering					

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: General discussions of Linear programming problems and their	20%	15
illustrations, Graphical method of solving two variable problem, Convex		
sets and their properties, Feasible solution, optimum solution, Slack and		
Surplus variables, L.P.P.in a standard form, Properties of a solution		
(without proof), Simplex method and its computational procedure,		
Artificial basis technique.		
Unit 2: Transportation problem, Methods for finding initial basic feasible	20%	15
solution: Northwest corner rule, Matrix minima method, Vogel's		
approximation method, optimal solution: MODI Method. Assignment		
problem: Hungarian Method.		
Unit 3: Project Management (PERT): Construction of networks, Network	20%	15
computations, Floats (free floats and total floats), Critical path method		
(CPM), Crashing.		
Unit 4: Game Theory: Definitions, Rules for Game Theory, Dominance	20%	15
Principle, Two-person zero-sum game, Game with mixed strategies,		
Graphical method.		
Unit 5: Sequencing Problem, Assumptions, Processing n jobs through 1	20%	15
machine, 2 machines and 3 machines, Processing 2 jobs through m		

machines, Processing n jobs through m machines.

List Of Practical Tutorial	Weightage	Contact hours
Unit 1: Practise examples on Unit 1	20%	3
Unit 2: Practise examples on Unit 2	20%	3
Unit 3: Practise examples on Unit 3	20%	3
Unit 4: Practise examples on Unit 4	20%	3
Unit 5: Practise examples on Unit 5	20%	3

Instructional Method and Pedagogy: (Max. 100 words) Chalk-board, Presentation, Use of Geogebra. Group Discussion, Case Study, Quizziz application.

Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1: Understand, Demonstrate: Identify and develop operational research models from the verbal description of the real system.	Understand, Demonstrate	Describe, Find
CO2: Understand: Understand the mathematical tools that are needed to solve optimization problems.	Understand, Remember	Demonstrate & Examine, Find
CO3. Solve: Use optimization techniques to solve the proposed models.	Evaluate	Examine, Find
CO4. Demonstrate, Apply: Develop a report that describes the model and the solving technique, analyse the results	Understand, Remember, Apply & Analyse	Define, Classify, Describe, Demonstrate & Examine
CO5. Understand: To understand the decision-making processes in Management Engineering	Understand, Remember, Apply & Analyse	Define, Classify, Describe, Demonstrate & Examine

Course Pre-requisites	Students should have basic knowledge about Immunity.
Course Category	Ability Enhancement Compulsory Course
Course focus	Employability
Rationale	To have an overview of inter-relationship between disaster and development and various disaster management frameworks and strategies.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	 Remember To introduce inter-relationship between disaster and development. Apply To introduce types of disasters with case studies and create awareness. Analyses To study the effective use of science for mitigating disasters Create To study case study of various famous disasters. Understand To introduce various disaster management frameworks and strategies adopted at national and international levels.

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Understanding the Concepts and Definitions of Disaster, Hazard, Vulnerability Risk, Capacity Disaster and Development, and Disaster Management Fundamental of Disasters-Types, Trends, Causes, Consequences and Control: Geological Disasters, Hydro-Meteorological Disasters, Biological Disasters, Technological Disasters, and Man-made Disasters. Global Disaster Trends – Emerging Risks of Disasters – Climate Change and Urban Disasters.	20%	6

Unit 2: Disaster Management Cycle and Framework-Disaster Management Cycle – Paradigm Shift in Disaster Management, Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, Zonation, Micro zonation, Prevention and Mitigation of Disasters, Early Warning System, Preparedness, Capacity Development; Awareness, During Disaster – Evacuation – Disaster Communication – Search and Rescue, Emergency Operation Centre– Incident Command System – Relief And Rehabilitation. Post -disaster Damage and Needs Assessment, Restoration of Critical Infrastructure – Early Recovery – Reconstruction and Redevelopment; IDNDR, Yokohama Strategy, Hyogo Framework of Action, Sendai framework.	20%	6
Unit 3: Disaster Management in India Disaster Profile of India – Mega Disasters of India and Lessons Learnt, Disaster, Management Act 2005 – Institutional and Financial Mechanism, National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter Governmental Agencies. Disaster Management Act in relation to COVID 19 Pandemic.	20%	6
Unit 4: Role of Science and Technology in Disaster Management Geo-informatics in Disaster Management (RS, GIS, GPS and RS), Disaster Communication System (Early Warning and Its Dissemination), Land, Planning and Development Regulations, Disaster Safe Designs and Constructions, Structural and Non-Structural Mitigation of Disasters, S&T Institutions for Disaster Management in India.	20%	6
Unit 5: Disaster Case Studies Various Case Studies on Disaster and Development, Disaster Prevention and Control, Risk Analysis and Management. Case study relating to COVID -19 to be explored.	20%	6

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:	Remember	Explain, Describe,
CO1 Possess awareness to mitigate the effects of disaster.		Discuss, Recall, Locate

CO2 Know local disaster management policies, regulations and authorities.	Apply	Apply, Practice, Interpret, Select,
CO3 Contribute in capacity building measures to mitigate disasters.	Analyses and Evaluation	Correlate Compare, Classify, Select, Investigate
CO4 Understanding role of science in mitigating disasters.	Create	Construct, Develop, Produce
CO5 Contribute to safe society by the study of various disasters.	Understand	Explain, Describe, outline, Predict, Summarize

Course Pre-requisites Course Category Course focus	Basic knowledge of microbial world and viruses. Core Professional Employability			
Rationale	Students will get an overview of types of viruses, their replication strategies and mechanisms for development of viral infectious diseases.			
Course Revision/ Approval Date:	14/03/2020			
Course Objectives (As per Blooms' Taxonomy)	 Remember The course will give an overve their replication strategies and mechanisms infectious diseases. Apply The distinctive characteristics between eukaryotes and viruses. The biological, chemproperties of viruses. The principles of viral. Analyses The structure of viruses and their. Create The bases of viral genetic variability viral evolution. Understand The interaction virus-host and remember 1. 	en prokaryotes, nical and physic taxonomy replicative cyclity and the prin	eal le neiples of	
Cour	se Content (Theory)	Weightage	Contact hours	
nature and definition of viruses, satellite viruses and Prions. The symmetry, enveloped and no	es of Viruses Introduction: Discovery of viruses, general properties, concept of viroids, virusoids, eories of viral origin Structure of Viruses: Capsid n-enveloped viruses Isolation, purification and taxonomy: Classification and nomenclature of	25%	15	
	sity, classification, one step multiplication curve, mbda phage) concept of early and late proteins, mbda phage.	25%	15	

Unit 3:Viral Transmission, Salient features of viral nucleic acids and Replication Modes of viral transmission: Persistent, non-persistent, vertical and horizontal Salient features of viral Nucleic acid: Unusual bases (TMV,T4 phage), overlapping genes (\$\phi\$X174, Hepatitis B virus), alternate splicing (HIV), terminal redundancy (T4 phage), terminal cohesive ends (lambda phage), partial double stranded genomes (Hepatitis B), long terminal repeats (retrovirus), segmented (Influenza virus), and non-segmented genomes (picornavirus), capping and tailing (TMV) Viral multiplication and replication strategies: Interaction of viruses with cellular receptors and entry of viruses. Replication strategies of viruses as per Baltimore classification (phi X 174, Retroviridae, Vaccinia, Picorna). Assembly, maturation and release of virions.	20%	12
Unit 4: Viruses and Cancer Introduction to oncogenic viruses Types of oncogenic DNA and RNA viruses: Concepts of oncogenes and proto- oncogenes.	20%	12
Unit 5: Prevention & control of viral diseases Antiviral compounds and their mode of action Interferon and their mode of action General principles of viral vaccination Applications of Virology Use of viral vectors in cloning and expression, Gene therapy and Phage display.	10%	06

Cause a Dra raguisitas	Students should have basic knowledge about medical microbiology.		
Course Pre-requisites	Students should have basic knowledge about medical microbiology.		
Course Category	Core Professional		
Course focus	Employability		
Rationale	To have an overview of medical microbiology		
Course Revision/ Approval	14/03/2020		
Date:			
Course Objectives	Remember To study normal microflora of human body		
(As per Blooms' Taxonomy)	Apply To study host pathogen interactions.		
	Analyses To study bacterial, viral, fungal, protozoan diseases.		
	Create To study about anti-microbial agents/drugs.		
	Understand To study about the mode of action of drugs.		

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Normal microflora of the human body and host pathogen	20%	6
interaction Normal microflora of the human body: Importance of normal		
microflora, normal microflora of skin, throat, gastrointestinal tract,		
urogenital tract Host pathogen interaction: Definitions - Infection,		
Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and		
their types, Opportunistic infections, Nosocomial infections. Transmission		
of infection, Pathophysiologic effects of LPS. Sample collection, transport		
and diagnosis Collection, transport and culturing of clinical samples,		
principles of different diagnostic tests (ELISA, Immunofluorescence,		
Agglutination based tests, Complement fixation, PCR, DNA probes).		
This 2. Description of the second sec	200/	-
Unit 2: Bacterial diseases List of diseases of various organ systems	20%	6
and their causative agents. The following diseases in detail with		
Symptoms, mode of transmission, prophylaxis and control respiratory		
diseases: Streptococcus pyogenes, Haemophilus influenzae,		
Mycobacterium tuberculosis Gastrointestinal Diseases: Escherichia		
coli, Salmonella typhi, Vibrio cholerae, Helicobacter pylori Others:		
Staphylococcus aureus, Bacillus anthracis, Clostridium tetani,		
Treponema pallidum, Clostridium deficient.		

Unit 3:Viral diseases List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis Protozoan Diseases List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control Malaria, Kala-azar.	20%	6
Unit 4:Fungal diseases Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention Cutaneous mycoses: Tinea pedis (Athlete's foot) Systemic mycoses: Histoplasmosis Opportunistic mycoses: Candidiasis parameters -pH, temperature, dissolved oxygen, foaming and aeration	20%	6
Unit 5:Antimicrobial agents: General characteristics and mode of action. Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Inhibitor of metabolism Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine Antibiotic resistance, MDR, XDR, MRSA,NDM-1.	20%	6

List Of Practical	Weightage	Contact hours
1. Identify bacteria (any three of E. coli, Salmonella, Pseudomonas,	20%	12
Staphylococcus, Bacillus) using laboratory strains		
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS.	20%	12
3. Study of bacterial flora of skin by swab method, Perform antibacterial sensitivity by Kirby-Bauer method, Determination of minimal inhibitory concentration (MIC) of an antibiotic.	20%	12
4. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).	20%	12
5. Study of various stages of malarial parasite in RBCs using permanent mounts.	20%	12

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Pre-requisites	Students should have basic knowledge of microbial biotechnology.
Course Category	Core Professional
Course focus	Employability
Rationale	To have an overview of microbial biotechnology.
Course Revision/ Approval	14/03/2020
Date:	
Course Objectives	Remember To introduce students to the developments/advances
(As per Blooms' Taxonomy)	made in the field of microbial biotechnology.
	Apply To know the usage of microbes and their products in therapeutics.
	Analyses To understand the applications of microbes in Biotransformation.Create To demonstrate the recovery of microbial products and an overview of Intellectual Property Rights.
	Understand To get insights in using microbes for Bioenergy and bioremediations.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology Use of prokaryotic and eukaryotic microorganisms in biotechnological applications Genetically engineered microbes for industrial application: Bacteria and yeast	20%	6
Unit 2:Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine) Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics Microbial biosensors. Therapeutics and Host pathogen interactions	20%	6

Unit 3: RNAi & Applications of Microbes in Biotransformation RNAi and its applications in silencing genes, drug resistance; Microbial based transformation of steroids and sterols Bio- catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute.	20%	6
Unit 4:Microbial Products, their Recovery & Intellectual Property Rights. Microbial product purification: filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization; Patents, Copyrights, Trademarks.	20%	6
Unit 5:Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents	20%	6

List Of Practical	Weightage	Contact hours
1. Study yeast cell immobilization in calcium alginate gels	20%	12
2. Study enzyme immobilization by sodium alginate method	20%	12
3. Isolation of xylanase or lipase producing bacteria	20%	12
4. Pigment production from fungi or bacteria.	20%	12

Instructional Method and Pedagogy:Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Remember To introduce students to the developments/advances made in the field of microbial biotechnology.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	ply To know the usage of microbes and their products in therapeutics.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Analyses To understand the applications of microbes in Biotransformation.	Analyses and Evaluation	Compare, Classify, Select, Investigate

CO4	Create To demonstrate the recovery of microbial products and an overview of Intellectual Property Rights.	Create	Construct, Develop, Produce
CO5	iderstand To get insights in using microbes for Bioenergy and bioremediations.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE	COURSE NAME	SEMESTER
BSMB504	RESEARCH METHODOLOGY	V

Teaching Scheme (Hours)				Teac Cre	ching edit		
Lecture	Practical	Tutorial	Total Hour s	Lecture	Practica l	Tutorial	Total Credit
60	60	-	120	4	0	2	6

Course Pre-requisites	Basic knowledge of Research Methodology.
Course Category	Core Professional
Course focus	Employability
Rationale	Students will get an overview of Methodology of research and handling processes
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	 Remember The objective of this course is to familiarize students with the research methodology and importance of project writing. Apply understand some basic concepts of research and its methodologies. Analyses Students should understand a general definition of research design Create Students should know why educational research is undertaken, and the audiences that profit from research studies. Understand Students should be able to identify the overall process of designing a research study from its inception to its report.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Theory: Basic concepts of Research: definition and types of research (Descriptive vs analytical; applied vs fundamental; quantitative vs qualitative; conceptual vs emperical). Research methods vs methodology. Literature-review and its consolidation; Library research; field research; laboratory research. Defining the Research Problem: Selecting and defining a research problem, Reviewing and conducting literature search, Developing a research plan.	20%	12
Unit 2: Theory: Data collection and documentation of observations: Methods of data collection, Maintaining a laboratory record; Tabulation and generation of graphs. Imaging of tissues specimens and application of scale bars.	20%	12
Unit 3: Theory: Model organisms in biology (A Brief overview): Genetics, Physiology, Biochemistry, Molecular Biology, Cell Biology, Genomics, Proteomics- Transcriptional regulatory network. Designing of Experiment: Different experimental designs – single and multifactorial design, Making measurements and sources of error in measurements	20%	12
Unit 4: Theory: General laboratory practices: Common calculations in laboratories. Understanding the details on the label of reagent bottles. Molarity and normality of common acids and bases. Preparation of solutions. Dilutions. Percentage solutions. Molar, molal and normal solutions. Technique of handling micropipettes; Knowledge about common toxic chemicals and safety measures in their handling.	20%	12
Unit 5: Theory: The art of scientific writing and its presentation: Numbers, units, abbreviations and nomenclature used in scientific writing. Writing references. Powerpoint presentation. Poster presentation. Scientific writing and ethics, Introduction to copyright-academic misconduct/plagiarism	20%	12

List Of Practical	Weightage	Contact hours
1.Each student will be asked to make presentation about the project including literature available, objective sought and work plan including methodologies as described above.	20%	12
2. The student will write standard operating protocols (SOPs) and identify requirement for equipment and reagents.	20%	12
3. Experiments based on chemical calculations	20%	12
4. Poster presentation on defined topics.	20%	12

5.Technical writing on topics assigned.	20%	12

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1 Understand some basic concepts of research and its methodologies.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2 Identify appropriate researchtopics.	Apply	Apply, Practice, Interpret, Select,
CO3 Select and define appropriate research problem and parameters. CO4 Prepare a project proposal (to undertake a project).	Analyses and Evaluation	Correlate Compare, Classify, Select, Investigate Construct,
	Create	Develop,
CO5 Organize and conduct research (advanced project) in a more appropriate manner.	Understand	Produce Explain, Describe, outline, Predict, Summarize

COURSE CODE	COURSE NAME	SEMESTER
BSMB601	IMMUNOLOGY	VI

Teaching Scheme (Hours)					ching edit		
Lecture	Practical	Tutorial	Total Hour s				Total Credit
6	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about Immunity.
Course Category	Core Professional.
Course focus	Employability
Rationale	To have an overview of Immune response and it's components. The subject also explains the regulation of immunoglobulin gene, major histocompatibility complexes, vaccines and vaccine development and immunodiagnostics.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	 Remember Outline, compare and contrast the key mechanisms and cellular players of innate and adaptive immunity. Apply Elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses. Analyses Outline key events and cellular players in antigen presentation, and how the nature of the antigen will shape resulting effectors responses. Create Understand and explain the basis of allergic diseases and immunodeficiencies related diseases. Understand The principles governing vaccination and the mechanisms of protection against disease.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Immune Response Theory: An overview, components of mammalian immune system, molecular structure of Immunoglobulins or Antibodies. Humoral & Cellular immune responses, T- lymphocytes & immune response (cytotoxic T-cell, helper T-cell, suppressor T-cells), Tcell receptors, genome rearrangements during Blymphocyte differentiation, Antibody affinity maturation class switching, assembly of T-cell receptor genes by somatic recombination.	20%	12

Unit 2: Regulation of immunoglobulin gene expression Theory: Clonal selection theory, allotypes & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line & somatic mutation), antibody diversity.	20%	12
Unit 3: Regulation of immunoglobulin gene expression Theory: Clonal selection theory, allotypes & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line & somatic mutation), antibody diversity.	20%	12
Unit 4: Vaccines & Vaccination Theory: Adjuvants, cytokines, DNA vaccines, recombinant vaccines, bacterial vaccines, viral vaccines, vaccines to other infectious agents, passive & active immunization.	20%	12
Unit 5:Immunodiagnostics Theory: Introduction to immunodiagnostics – RIA, ELISA. etc	20%	12

List Of Practical	Weightage	Contact hours	
1: Differential leucocytes count	10%	4	
2: Total leucocytes count	10%	4	
3: Total RBC count	10%	4	
4: Separation of serum from blood	10%	4	
5: Hemagglutination assay	10%	4	
6: Hemagglutination inhibition assay	10%	4	
7: Latex Agglutination Assay	10%	4	
8: Single radial ImmunoAssay	10%	4	
9: Double immunodiffusion test using specific antibody and antigen.	10%	4	
10: Dot ELISA	10%	4	
11: Sandwich ELISA	10%	4	

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1 Outline, compare and contrast the key mechanisms and cellular players of innate and adaptive immunity.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2 Elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Outline key events and cellular players in antigen presentation, and how the nature of the antigen will shape resulting effector responses	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Understand and explain the basis of allergic diseases and immunodeficiencies related diseases.	Create	Construct, Develop, Produce
CO5 Understand the principles governing vaccination and the mechanisms of protection against disease.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE	COURSE NAME BIOINFORMATICS	SEMESTER
BSMB602	AND INTRODUCTION TO DRUG	VI
	DISCOVERY, DESIGN AND	
	DEVELOPMENT	

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hour s	Lecture	iire Practical Liitorial		Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about fundamental theories and practices of bioinformatics and it will also provide an overview of the drug development process, focusing on drug development science, regulation.			
Course Category	Core Professional.			
Course focus	Employability			
Rationale	To have an overview of the fundamental theories and practices of bioinformatics and an overview of the drug development process, focusing on drug development science, regulation.			
Course Revision/ Approval Date:	14/03/2020			
Course Objectives (As per Blooms' Taxonomy)	 Remember provide an overview of the drug development process, focusing on drug development science, regulation. Apply to introduce the fundamental theories and practices of bioinformatics, which is an interdisciplinary thrust area merging Biology and Information Technology. Analyses Safety evaluation, bioavailability, clinical trials, and the essentials of patent law. Create drug development as a process involving target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening. Understand Understand biological databases, analysis of macromolecular Sequences and phylogenetic analysis. 			

Course Content (Theory)	Weightage	Contact hours
Unit 1: Basic Computer- MS-WORD, EXCEL, Microsoft PowerPoint, Adobe Photoshop Introduction to Bioinformatics: Introduction to Bioinformatics, Introduction to biological macromolecules, History of Bioinformatics, Scope of Bioinformatics Introduction to Biological databases, Nucleic acid databases: Introduction to biological databases in general, Classification- Primary, Secondary, Composite databases, Flat files in databases, various file formats, FASTA, GENBANK, Nucleic acid sequence databases- GENBANK, EMBL, DDBJ etc.	20%	12
Unit 2: Protein databases and specialized databases: Protein sequence and structure databases – UNIPROT, PIR, SWISS-PROT, PDB etc., Other databases of patterns/ motifs/ metabolic pathways/ Immunology/genetic disorders etc, Composite databases like NCBI, Data base searching, Bibliographic databases like PUBMED	20%	12
Unit 3: Genome databases and search protocol: Genome databases at NCBI, SANGER, TIGR etc.Secondary database search protocol, Use of Boolean operators	20%	12
Unit 4: Sequence alignment: Pairwise alignment techniques Global alignment, Local alignment, pairwise alignment techniques- continued, Significance of alignment- Z-score, P-score, E-value, Multiple sequence alignment-Dynamic programing Sequence alignment, BLAST analysis: Multiple sequence alignment techniques- continued- profile, Hidden Markov Model, BLAST analysis, E-value, Different types of BLAST, PSI-BLAST, PHI-BLAST.	20%	12
Unit 5: Introduction to Drug Discovery, Design and Development: Introduction to Drug Design and Development, Drug targets, Lead Identification and Modification, Computer-Aided Drug Design, Drug Delivery, Pre-clinical and Clinical Testing Overview and career opportunities	20%	12

List Of Practical	Weightage	Contact hours
1: Use of various tools in NCBI and Familiarizing with various databases like PROSITE, PUBMED, OMIM, KEGG etc.	20%	12
2: Retrieval of nucleotide and protein sequences from databases like GENBANK, UNIPROT etc and Homology modeling using SWISS-PROT	20%	12
3: Familiarizing with genome specific databases like TAIR, GENE db. Etc.	20%	12
4: Sequence alignment- Pairwise and Multiple Sequence alignment and Phylogeny analysis BLAST analysis and Variations in BLAST analysis.	20%	12

5: Use of visualizing software like PYMOL, CHIMERA and Using various web-	20%	12
based software for primer designing, sequence and structure analysis like		
PROTPARAM, PROCHECK etc.		

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1 Basic Computer skills.	Apply	Explain, Describe, Discuss, Recall, Locate
CO2 Acquire knowledge about various biological databases and how to retrieve and use data from these databases.	Understand	Apply, Practice, Interpret, Select, Correlate
CO3 Understand the concepts involved in sequence alignment and phylogeny Analysis.	Remember	Compare, Classify, Select, Investigate
CO4 Be able to describe the process of drug discovery and development.	Create	Construct, Develop, Produce
CO5 Be able to discuss the challenges faced in each step of the drug discovery process.	Analyses and Evaluation	Explain, Describe, outline, Predict, Summarize

COURSE CODE COURSE NAME SEMESTER
BSMB603 FOOD AND DAIRY VI
MICROBIOLOGY

Teaching Scheme (Hours)				Teachin	g Credit		
Lecture	Practical	Tutorial	Total Hours	Lactura Practical Tutorial			Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of food and dairy microbiology.			
Course Category	Core Professional.			
Course focus	Employability			
Rationale	To have an overview of the basic food and dairy microbiology.			
Course Revision/Approval Date:	14/03/2020			
Course Objectives	Remember Developed a clear understanding of the multifarious			
(As per Blooms' Taxonomy)	roles of microorganisms in soil, in association with plants and thus			
	in the field of agriculture.			
	Apply Are able to describe the role of microorganisms in the production of food, its spoilage, including their role in homemade fermented foods. Analyses Are able to identify the role of microorganisms in the causation of the diseases and how to protect against food-borne pathogens.			
	eate Developed experimental skills for testing the milk and different foods for the presence of microorganisms.			
	iderstand To develop Understanding in dairy sciences.			

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Foods as a substrate for microorganisms. Intrinsic and extrinsic factors that affect growth and survival of microbes in foods, natural flora and source of contamination of foods in general. Microbial spoilage of various foods. Principles, Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods.	20%	12
Unit 2:Principles, physical methods of food preservation: temperature (low, high, canning, drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging, chemical methods of food preservation: salt, sugar, organic acids, SO2, nitrite and nitrates, ethylene oxide, antibiotics and bacteriocins.	20%	12

Unit 3: Dairy starter cultures, fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese, other fermented foods:	20%	12
dosa, sauerkraut, soy sauce and tampeh, Probiotics: Health benefits, types		
of microorganisms used; probiotic foods available in market		
Unit 4: Food intoxications: Staphylococcus aureus, Clostridium	20%	12
botulinum and mycotoxins; Food infections: Bacillus cereus, Vibrio		
parahaemolyticusEscherichia coli, Salmonellosis, Shigellosis, Yersinia		
enterocolitica, Listeria monocytogenes and Campylobacter jejuni.		
Unit 5: HACCP, Indices of food sanitary quality and sanitizers Cultural	20%	12
and rapid detection methods of food borne pathogens in foods and		
introduction to predictive microbiology		

List Of Practical	Weightage	Contact hours
1. MBRT of milk samples and their standard plate count.	20%	12
2. Alkaline phosphatase test to check the efficiency of pasteurization of milk.		
3. Isolation of any food borne bacteria from food products.	20%	12
4. Isolation of spoilage microorganisms from spoiled vegetables/fruits.	20%	12
5. Isolation of spoilage microorganisms from bread.	20%	12
6. Preparation of Yogurt/Dahi.	20%	12

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Developed a clear understanding of the multifarious roles of microorganisms in soil, in association with plants and thus in the field of agriculture.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Are able to describe the role of microorganisms in the production of food, its spoilage, including their role in homemade fermented foods.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Are able to identify the role of microorganisms in the causation of the diseases and how to protect against foodborne pathogens.	Analyses	Compare, Classify, Select, Investigate
CO4	Developed experimental skills for testing the milk and different foods for the presence of microorganisms.	Create	Construct, Develop, Produce
CO5	To develop Understanding in dairy sciences.	Understand	Explain, Describe, outline, Predict, Summarize

BSMB604 BIOSAFETY, BIOETHICS VI
AND INTELLECTUAL
PROPERTY RIGHTS

Teaching Scheme (Hours)					Teachin	g Credit	
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Tutorial			Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of biosafety regulations,
	bioethics and Intellectual Property Rights (IPRs).
Course Category	Discipline Specific Course.
Course focus	Employability
Rationale	To have an overview of the basic knowledge of biosafety
	regulations, bioethics and Intellectual Property Rights (IPRs)
Course Revision/Approval	14/03/2020
Date:	
Course Objectives	Remember To understand various aspects of biosafety regulations,
(As per Blooms' Taxonomy)	bioethics used in biological materials in the laboratory in context of
	environment and human health and Intellectual Property Rights
	concerns arising from the commercialization of biotech products.
	Apply Students will gain awareness about Intellectual Property
	Rights (IPRs) to take measure for the protection of their ideas.
	alyses They will be able to devise business strategies by taking
	account of IPRs.
	eate They will be able to assist in technology upgradation and
	enhancing competitiveness.
	iderstand They will acquire adequate knowledge in the use of genetically modified organisms and its effect on human health.

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Introduction of Biosafety in the laboratory, General principles for the laboratory and environmental biosafety, Biosafety guidelines, Biosafety levels, laboratory biosecurity concepts, Regulatory framework; National and international biosafety policies and law.	20%	12
Unit 2: Health aspects of Biosafety; toxicology, allergenicity, antibiotic resistance, Risk management issues and containment. Radiation safety and non-radio isotopic procedure.	20%	12
Unit 3: Good microbiological techniques and good laboratory practice (GLP), Basic principles of quality control (QA) and quality assurance (QC), Guidelines for QA and QC: raw materials, sterilization, media, stock cultures and products, Role of culture collection centre, public health laboratories and regulatory agencies.	20%	12
Unit 4: Concept of Intellectual properties, copyrights, trademarks, trade secrets, patents, geographical indications.	20%	12

Unit	5:	Implications	of	intellectual	property	rights	on	the	20%	12
commer	cializat	ion of biotecl	hnolo	gy products.	National	and i	nterna	tional		
patent a	ct and	amendments,	pater	nt filing.						

List Of Practical	Weightage	Contact hours
1: Understanding of the importance of good laboratory management and practices	20%	12
2: Lab SOPs/Protocols management.	20%	12
3: Lab QA/QC.	20%	12

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	To understand various aspects of biosafety regulations, bioethics used in biological materials in the laboratory in context of environment and human health and Intellectual Property Rights concerns arising from the commercialization of biotech products. BSMB605 ENVIRONMENTAL VI
MICROBIOLOGY

Teaching Scheme (Hours)				Teachin	g Credit		
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about environmental science and students of all disciplines can think critically, ethically, and creatively when evaluating environmental issues
Course Category	Discipline Specific Course.
Course focus	Employability
Rationale	To have an overview of the environmental science and students of all disciplines can think critically, ethically, and creatively when evaluating environmental issues.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	Remember To introduce environmental microbiology and its scope Apply To understand the role of microbes in biogeochemistry
	Analyses To understand various modes of biotic interaction of microbes
	Create Toget insights of role of microbes in pollution control
	Understand To get acquainted with applied aspects of environmental microbiology

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microorganisms and their Habitats: Structure and function of ecosystems	20%	12
Terrestrial Environment: Soil profile and soil microflora Aquatic Environment: Microflora of fresh water and marine habitats Atmosphere: Aero microflora and		
dispersal of microbes Animal Environment: Microbes in/on human body		
(Microbiomes) & animal (ruminants) body. Extreme Habitats: Extremophiles:		
Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels		
Unit 2: Microbial Interactions Microbe interactions: Mutualism, synergism,	20%	12
commensalism, competition, amensalism, parasitism, predation Microbe-Plant		
interaction: Symbiotic and non-symbiotic interactions Microbe-animal		
interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria		
	200/	10
Unit 3: Biogeochemical Cycling Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin Nitrogen cycle: Nitrogen	20%	12
fixation, ammonification, nitrification, denitrification and nitrate		
reduction Phosphorus cycle: Phosphate immobilization and		
solubilisation Sulphur cycle: Microbes involved in sulphur cycle Other		
elemental cycles: Iron and manganese.		

Unit 4: Waste Management Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill) Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment	20%	12
Unit 5: Microbial Bioremediation and Water Potability: Principles and degradation of common pesticides, hydrocarbons (oil spills). Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test/MPN test, confirmed and completed tests for fecal coliforms (b) Membrane filter technique and (c) Presence/absence tests.	20%	12

List Of Practical	Weightage	Contact hours
1. Analysis of soil - pH, moisture content, water holding capacity	10%	4
2. Determination of Chlorine in Water	10%	4
3. Finding MPN (Most Probable Number) of the water sample	10%	4
4. Measure mineral and phenolphthelin Acidity	10%	4
5. Study the presence of microbial activity by detecting	10%	4
(qualitatively) enzymes (dehydrogenase, amylase, urease) in soil.		
6. Isolation of Rhizobium from root nodules	10%	4
7. Isolation of microbes (bacteria & fungi) from rhizosphere and	10%	4
8. rhizoplane.		
9. Find Dissolved Oxygen (DO) of the water sample	10%	4
10. Find Chemical Oxygen Demand (COD) of the water sample	10%	4
11. Find Biological Oxygen Demand (BOD) of the water sample	10%	4
12. Perform Presumptive test and Confirm test for Coliform	10%	4

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Student will be able to demonstrate microbial diversity	Apply	Explain, Describe, Discuss, Recall, Locate
CO2	The students will be updated interaction of microbes with other organisms	Remember	Apply, Practice, Interpret, Select, Correlate
CO3	The students will be updated with general concepts role of microbes in biogeochemical cycling	Analyses	Compare, Classify, Select, Investigate
CO4	The students gain knowledge on general characteristics of fungi, bacteria, virus and mycoplasma like organisms causing plant diseases.	Create	Construct, Develop, Produce

Students will be acquainted with reproduction in fungi and fungal like organisms causing plant diseases.

Understand

Explain, Describe, outline, Predict,

Summarize

COURSE CODE	COURSE NAME	SEMESTER
BSMB606	ADVANCES IN	VI
	MICROBIOLOGY	

Teaching Scheme (Hours)				Teachin	g Credit		
Lecture	Practical	Tutorial	Total Hours	Lecture Practical Tutorial Total Credit			
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of advances in microbiology		
Course Category	Professional Elective/Core Professional/Generic Elective/Courses Offered by other departments/Open Elective		
Course focus	Employability		
Rationale	To have an overview of the basic knowledge of advances in microbiology		
Course Revision/Approval Date:	14/03/2020		
Course Objectives	Remember Understand the basic microbial structure and functions		
(As per Blooms' Taxonomy)	of various physiological groups of prokaryotes and eukaryotes and also learn the theory and practical skills in microscopy handling and staining techniques Apply Know various Culture media and their applications and understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures Analyses Comprehend the various methods for identification of unknown microorganisms and study microbial metabolism. Autotrophy and heterotrophy modes of nutrition.		
	eate Understand the microbial physiology and know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement		
	iderstand .		
	derstand the regulation of biochemical pathway and possible process modifications for improved control over microorganisms for microbial product synthesis.		

Course Content (Theory)	Weightage	Contact
		hours
Unit 1: Evolution of Microbial Genomes. Salient features of sequenced	20%	12
microbial genomes, core genome pool, flexible genome pool and concept		
of pangenome, Horizontal gene transfer (HGT), Evolution of bacterial		
virulence - Genomic islands, Pathogenicity islands (PAI) and their		
characteristics.		

Unit 2:Metagenomics. Brief history and development of metagenomics, understanding bacterial diversity using metagenomics approach, Prospecting genes of biotechnological importance using metagenomics. Basic knowledge of viral metagenome, meta transcriptomics, metaproteomic and metabolomics.	20%	12
Unit 3: Metagenomics. Brief history and development of metagenomics, understanding bacterial diversity using metagenomics approach, Prospecting genes of biotechnological importance using metagenomics. Basic knowledge of viral metagenome, meta transcriptomics, metaproteomic and metabolomics.	20%	12
Unit 4: Molecular Basis of Host-Microbe Interactions. Biofilms: types of microorganisms, molecular aspects and significance in environment, health care, virulence and antimicrobial resistance.	20%	12
Unit 5: Systems and Synthetic Biology. Networking in biological systems, Quorum sensing in bacteria, Co-ordinated regulation of bacterial virulence factors, Basics of synthesis of poliovirus in laboratory, Future implications of synthetic biology with respect to bacteria and viruses. Gene editing concept with suitable example	20%	12

List Of Practical	Weightage	Contact hours
1) Extraction of metagenomic DNA from soil.	20%	12
2) Understand the impediments in extracting metagenomic DNA from soil.	20%	12
3) PCR amplification of metagenomic DNA using universal 16s ribosomal gene primers.	20%	12
4) Case study to understand how the poliovirus genome was synthesized in the laboratory.	20%	12
5) Case study to understand how networking of metabolic pathways in bacteria takes place	20%	12

	Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes and also learn the theory and practical skills in microscopy	Remember	Explain, Describe, Discuss, Recall, Locate

	handling and staining techniques		
CO2	Know various Culture media and their applications and understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Comprehend the various methods for identification of unknown microorganisms and study microbial metabolism – Autotrophy and heterotrophy modes of nutrition.	Analyses	Compare, Classify, Select, Investigate
CO4	Understand the microbial physiology and know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement	Create	Construct, Develop, Produce
CO5	Understand the regulation of biochemical pathway and possible process modifications for improved control over microorganisms for microbial product synthesis.	Understand	Explain, Describe, outline, Predict, Summarize
